ESAB Welding & Cutting Products

Value & Performance Equal Confidence

ESAB delivers superior-value performance that allows today's industrial fabricator to attack any challenge with confidence.

Innovation Grounded in Experience

Our innovative, world-renowned equipment and solutions are developed with input from our customers and built with the expertise and heritage of a global manufacturing leader.

A World of Products & Solutions

ESAB's reach extends to almost every nation in the world, with **more than 8,600 employees**, an established corporate **presence in 47 countries**, and **23 manufacturing facilities** across **6 continents**.

Certified, Globally

ESAB is the first company in the world to achieve all-inclusive, external certification for the three key management standards - **ISO 9001**, **ISO 14001**, and **OHSAS 18001**. The Environmental, Health, and Safety Management System and certification covers all activities, people, and units in ESAB globally.

Arc Welding Processes

Gas Metal Arc Welding (GMAW, MIG)

This most flexible metal joining process involves an arc established between the workpiece and a wire electrode, which is continuously fed by a wire feeder through a torch.

The arc continuously melts the electrode to form the weld puddle.

An appropriate gas or gas mixture shields the weld area from atmospheric contamination.

The GMAW process has the advantages of high deposition rates, speed, excellent weld quality, minimal distortion of the workpiece, and no stub loss.

GMAW applications include several distinct process variations. Selection depends largely on the workpiece thickness and welding position:

Short Circuiting (Short Arc, Dip Transfer)

Involves a small fast-freezing weld puddle. Metal is transferred from the electrode to the puddle by repeated short circuits. Small diameter wires are used and the process operates at low currents and voltages. Short arc is used for welding thin gauge metals in all positions and for vertical and overhead welding of heavier sections.

Spray Arc

Electrode metal is transferred to the weld puddle as discrete droplets. Deposition rate is high and there is little or no spatter. With solid wire, the technique is used for 1/8 in. (3.2 mm) and thicker workpieces and for downhand welding.

Pulsed Spray Arc

The welding current is varied rapidly between a high and a low value. Metal is transferred to the work only during the high current period. The high peak current provides excellent arc stability. The period of low current maintains the arc and reduces the average current, making it possible to weld thinner gauge materials and to weld in all positions using larger sized wire electrodes than otherwise possible.

Cored Wire (FCAW, MCAW)

The electrode is fabricated from strip, enclosing a core of flux and metal which protects and refines the weld puddle and controls bead shape. Some cored wires can be used without external shielding gas. Smaller diameter wires can be used for all position welding. The addition of fluxing, alloy and slag-forming materials often allows high deposition rates, higher welding speeds and improved all-position capability compared with solid wires. This makes cored wire the material of choice in many high-production applications.

Shielded Metal Arc Welding (SMAW, Stick)

In this first practical arc welding process, the arc is established between a wire rod and the workpiece. The rod is coated with materials, which generate a slag to protect the weld puddle and the solidifying weld metal from the atmosphere.

The coating may also supply alloying and refining ingredients, and the slag may help shape the weld bead, especially in vertical and overhead applications.

Electrodes are available for welding most carbon, low alloy, and stainless steels, some non-ferrous metals, and a wide range of maintenance and repair applications.

Light-duty work is often done with AC power from low cost transformers; production work usually involves DC power from heavy-duty rectifiers.

Gas Tungsten Arc Welding (GTAW, TIG)

Introduced by ESAB, the GTAW process produces welding heat from an arc between a non-consumable tungsten electrode and the workpiece. An inert gas, usually Argon, shields the arc and the workpiece.

Welding consumables, if used, are added

separately. Because the process uses totally inert shielding gas, welds of the highest quality are produced, and almost any metal can be welded.

Additional Technical Information

ESAB Technical Service Representatives are available to answer your questions. We also recommend that you take advantage of a series of handbooks published by ESAB which provide excellent guidance on the use of the arc welding processes. In addition, there are references from other sources which can be very helpful in achieving the best possible results.

Call ESAB at 1.800.ESAB.123 to find out more.

Important Product Safety

Sound common sense procedures must be followed for personal protection and operating efficiency when using arc welding equipment. Always comply with the manufacturer's recommendations for operating and maintaining the equipment, as set forth in the instructions provided with each unit. Also, be certain to use all applicable safety precautions, as described in *Precautions and Safe Practices for Arc Welding, Cutting and Gouging*, #F-52-529, which is available by contacting ESAB at 1-800-ESAB.123 or visiting esabna.com.

Caddy® Mig C200i

1 Phase DC CV  

- Easy-to-use, intelligent, and powerful inverter power source for GMAW applications with mild steels, aluminum, and stainless steel as well as GMAW brazing
- Lightweight and portable, the Caddy Mig is an excellent choice for repair, maintenance, and assembly work, both in the workshop and while on the go
- Weighing a little over 26 lbs. (12 kg), the Caddy Mig is the lightest welding unit in its output class
- Durable, impact-resistant housing made from advanced materials, including built-in cable, for easy transportation
- PFC (power factor correction) feature provides 30% more welding power from the same sized fuse
- QSet™ feature automatically sets the welding parameters and automatically adjusts during the process to maintain the optimum wire/gas combination and prevent waste of resources
- If you prefer, you can make adjustments with the wire feed speed and voltage
- A single-phase input connection makes it easy to find an electrical source and the machine performs equally as well when powered by a portable generator
- Built-in wire feeder fits a wire spool with an inner diameter of 2 in. (50 mm), external diameter of 8 in. (203 mm), and width of 2-1/8 in. (55 mm)
- Optimized to weld with .023 in. (0.6 mm), .030 in. (0.8 mm), and .035 in. (0.9 mm) solid or cored wires
- We recommend the following ESAB wires when welding with the Caddy Mig C200i:
 - Spoolarc 86, .023, .030 and .035 in. for welding of mild steels
 - Coreshield 15, .030 in. for gasless welding of mild steels
 - ERCuSi-A .030 and .035 in. for GMAW brazing
 - ESAB ER308LSi MIG .023, .030 and .035 in. for 18Cr 8Ni stainless steel welding
 - AlcoTec 5356 .035 in. for aluminum welding

Migmaster® 215 Pro & 280 Pro

Arc
Equipment

1Phase DC CV 3
YEAR
100%
GUARANTEED

- Sturdy, robust step-controlled welding power sources
- Intended for medium (215 Pro) to heavy-duty (280 Pro) GMAW applications with solid wires of steel, stainless steel, and aluminum, as well as cored wires with or without shielding gas
- ESAB's proven technology and software provide reliability and outstanding welding performance
- Made with a strong galvanized metal casing to withstand harsh environments
- Large wheels and built-in wire feeder make these machines practical, mobile solutions
- The units are fan-cooled and equipped with thermal overload protection
- A wide current and voltage range, plus two inductance outlets (280 Pro) make it easy to optimize settings for a variety of consumables and shielding gases
- Equipped with V/A digital meter with hold feature
- Equipped with the potentiometers to set the wire feed speed, spot welding time, and burnback time adjustment
- Equipped with additional functions such as creep start and inching

Origo™ Mig 320 & 410

with Origo Feed 304 M12

3Phase DC CVCC 

Arc
Equipment

- Step-switched power sources for medium (320) to heavy-duty (410) GMAW applications
- Made with a strong galvanized metal casing to withstand harsh environments
- Large wheels, sturdy lifting eyelets, and an undercarriage designed for forklift transport make the Origo Mig easy to move
- The wide current and voltage range make it easy to optimize settings for a wide variety of consumables and shielding gases
- Optimized to operate together with the Origo Feed 304 M12 wire feeder available with 1.18 in. (30 mm) diameter feed rolls for wires up to 1/16 in. (1.6 mm) diameter
- Electronically controlled feeding gives an accurate and stable arc
- The wire feed unit sits on a swivel post mounted on the top of the power source, providing a 360° radius of operation
- The feeder mechanism is easy to access, and all wear parts can easily be exchanged
- A single pressure device makes it easy to adjust the appropriate feeding pressure
- All electronic components are protected in a separate compartment

Ratings are based on tests that comply with NEMA ARC Welding Section Standard 11-6-1975 for duty cycle. "The time period of one complete cycle shall be 10 minutes" (60% = 6 minutes). National Electrical Manufacturers Association 2101 L Street N.W., Washington, D.C., 20037.

ST Water-Cooled GMAW Guns

- Rated at 600A with any shielding gas
- Handles flux cored wires to 7/64 in. (2.8 mm)
- ST-21M has an in-line body style designed for mechanized applications

GMAW Spool Gun Packages

100%
DUTY CYCLE

ST-23A Spool Gun

- Rugged 250A @ 100% duty cycle performance
- Service lines enter the rear of gun instead of handle for improved balance and accessibility
- Inching push button mounted on bottom of handle
- 30 ft. (9 m) service lines
- Designed for use with Migmaster compacts
- Weighs less than 3 lbs. (1.3 kg)
- Uses durable contact tips and nozzles
- Powerful gear motor in handle pulls welding wire from 4 in. (101.5 mm) diameter spool in the molded gun case
- Partial depression of the torch trigger controls gas pre- and post-flow operations - full depression provides wire feeding as well as gas flow
- Wire feed control mounted on gun provides precise adjustment of wire feed rate at torch

ST-23A Spool Gun

MT-250 SG Spool Gun

- Designed for use with Migmaster compacts
- Weighs less than 3 lbs. (1.3 kg)
- Uses durable MT contact tips and nozzles
- Powerful gear motor in handle pulls welding wire from 4 in. (101.5 mm) diameter spool in the molded gun case
- Partial depression of the torch trigger controls gas pre- and post-flow operations - full depression provides wire feeding as well as gas flow
- Wire feed control mounted on gun provides precise adjustment of wire feed rate at torch
- Medium-duty 200A @ 100% duty performance
- Spool holder adjusts to balance in the operator's hand
- 25 ft. (7.6 m) service lines

MT-250 SG Spool Gun

GMAW Spool Gun Packages

ST-23A Spool Gun

Ordering Information

ST-23A Spool Gun 19164

Includes: one 3/64 in. (1.2 mm) contact tip, drive roll, liner, control cable, gas hose and #10 nozzle and 30 ft. (9 m) service lines.

Options & Accessories

Warrior 500i spool gun option	0588002061
Zippered hose sheath, 25 ft. (7.6 m) ¹	35454
ST-23A control cable extension ²	636968
ST-23A power cable/gas hose extension ³	15626
ST-23A adaptor kit ⁴	37301

ST-23A Feed Rolls

.030-.035 in. (0.8-0.9 mm).....	636343
.045-.062 in. (1.2-1.6 mm) ⁵	996112

Torch Liners

Torch liner, .045-.062 in. (1.2-1.6 mm) ⁶	19167
Torch liner, .030-.035 in. (0.8-0.9 mm).....	19166

¹For gun service line protection.

²Extends spool gun control cable by 30 ft. (9 m).

³Includes coupling #11N19 for extending 30 ft. (9 m).

⁴For Migmaster 215 & 280 PRO.

⁵As delivered.

Equipment

Caddy™ Tig 2200i DC

1 Phase DC CC  **100% Satisfaction Guaranteed**

- Fifth generation Caddy machines feature advanced inverter technology built-in delivering unparalleled performance in a rugged, portable package
- Designed for quality GTAW applications with a variety of metals
- Extremely easy to use - all welding parameters displayed in an easy-to-understand format
- The TA34, 2-program function panel allows pre-programming and program changes during welding
- The TA34 panel also includes dual memory settings, switchable from the panel or torch trigger, and the capacity to set slope up/down and post-gas
- Pulsed TIG feature for greater control of heat input and weld pool
- Micro Pulse minimizes the heat affected zone, particularly when working with thin metals
- ArcPlus II improves welding characteristics and simplifies work for better weld quality with less clean up
- Hot Start and Arc Force settings create true SMAW characteristics
- Equipped with large OKC50 cable connectors for greater durability
- Compact design with impact resistant polymer and aluminum casing makes this unit lightweight and easy to carry
- Large heat sinks and innovative design make these Caddy machines run cooler for longer machine life even when used in harsh environments
- Designed to keep sensitive interior parts clean and dust free
- Built in accordance with IP 23 for outdoor use, even in wet weather conditions making Caddy Tig ideal for on-site work
- Equipped with a PFC (Power Factor Correction) circuit to allow the machine to perform a full range of functions on a 16A fuse, protects against fluctuating input voltage, and makes it safer to use with a generator
- Caddy Tig supplies direct current and allows you to weld most metals including alloy and non alloy steel, stainless steel and cast iron
- Caddy Tig welds electrodes up to 5/32 in. (4 mm) diameter

Ordering Information

Caddy Tig 2200i DC, 230V, 1ph 0460450883
Includes: power supply, TXH-201 torch 13 ft. (4 m) w/ remote on/off contactor, "crocodile" type electrode holder with 10 ft. (3 m) cable, GTAW accessory kit, R-33 regulator/flowmeter, 5 ft. (1.5 m) gas hose, 10 ft. (3 m) work cable and ground clamp, and 10 ft. (3 m) primary cable with plug.

Caddy™ Tig 2200i AC/DC

- Unparalleled performance in a mobile machine for a wide range of GTAW (TIG) and SMAW (Stick) applications
- Designed for quality GTAW applications with all types of metals
- Extremely easy to use - all welding parameters displayed in an easy-to-understand format
- Innovative QWave™ feature enables AC welding with exceptional arc stability and low noise
- AC frequency and balance control optimizes weld pool
- Electrode preheating facilitates excellent starts and extends electrode life
- The TA34, 2-program function panel allows pre-programming and program changes during welding
- AC Balance to control arc cleaning and penetration, AC Frequency to control arc width, and a special setting to control electrode preheating for better starts with a variety of electrodes
- DC Pulsed TIG welding for easy control of heat input and weld pool
- Micro Pulse minimizes the heat affected zone, particularly when working with thin metals
- Hot Start, Arc Force and polarity switch (DC) creates true SMAW characteristics in AC and DC mode
- Equipped with large OKC50 cable connectors for greater durability
- Features compact design with impact resistant polymer and aluminum casing – makes the unit lightweight and easy to carry
- Small size does not compromise vital cooling of internal components
- Large heat sinks and innovative design make these Caddy machines run cooler - promotes longer machine life even when used in harsh environments
- Designed to keep sensitive interior parts clean and dust free
- Built in accordance with IP 23 for outdoor use, even in wet weather conditions - makes this machine ideal for on-site work
- Equipped with a PFC (Power Factor Correction) circuit - allows the machine to perform a full range of functions on a 16A fuse, protects against fluctuating input voltage, and makes it safer to use with a generator

Ordering Information

Caddy Tig 2200i AC/DC, standard 0460150883

Includes: power supply, TXH-201 torch 13 ft. (4 m) w/remote on/off contactor, electrode holder with 10 ft. (3 m) cable, GTAW accessory kit, regulator/flowmeter, 7 ft. (2 m) gas hose, 15 ft. (4.5 m) work cable and ground clamp, and 10 ft. (3 m) primary cable with plug.

Caddy Tig 2200iw AC/DC with water cooler ... 0460150884

Includes: 10 ft. (3 m) of mains cable, no plug, 5 ft. (1.5 m) of gas hose with 2 hose clamps, 10 ft. (3 m) return cable with work clamp, SMAW kit, 2-wheel trolley, and CoolMini water cooler.

Caddy Tig 2200i AC/DC with finger control* ... 0561000125

Includes: power supply, RA T1 remote adaptor, TXH-201r torch 13 ft. (4 m) w/remote on/off contactor and variable current control, electrode holder w/10 ft. (3 m) cable, GTAW accessory kit, regulator/flowmeter, 7 ft. (2 m) gas hose, 15 ft. (4.5 m) work cable and ground clamp, and 10 ft. (3 m) primary cable with plug.

Caddy Tig 2200i AC/DC with foot control* 0561000126

Includes: power supply, TXH-201 torch 13 ft. (4 m) w/remote off/on contactor, T1-CAN foot control with 16.4 ft. (5 m) cable, electrode holder with 10 ft. (3 m) cable, GTAW accessory kit, regulator/flowmeter, 7 ft. (2 m) gas hose, 15 ft. (4.5 m) work cable and ground clamp, and 10 ft. (3 m) primary cable with plug.

Heliarc® 281i, 283i & 353i AC/DC

Arc
Equipment

1Phase 3Phase ACDC 3 YEAR 100% GUARANTEED

- Designed for quality GTAW and SMAW applications in all types of material
- Cost effective inverter technology at an SCR price - increased energy efficiency and more power from a lighter, smaller, and more portable unit
- Easy-to-control arc heat input for high quality welds
- Intuitive interface for easy setup and adjustment
- Digital controls ensure high accuracy and repeatability
- AC or DC Pulsed TIG welding - easy control of heat input and weld pool
- AC Hot Start is available at currents below 130A to boost current at the initial start to improve weld puddle initiation and arc penetration
- Control the arc with remote or foot control - switch between two currents by pressing torch switch
- Live TIG is ideal in places where high-frequency (HF) is not allowed
- AC Pulsing up to 2Hz makes Heliarc ideal for welding thin aluminum material
- Easily store up to 60 parameter sets for quick changes while working

TXH™ GTAW Torches

TXH-121, 151, 201, 251 & 401

- TXH torches are designed to provide the utmost in convenience, versatility, and ergonomics to the welder
- Choose between air-cooled and water-cooled versions, with or without gas valve, and with or without a flexible neck to suit specific applications
- The torch heads are manufactured with high temperature resistant silicone rubber insulation
- All copper components ensure cooler running temperatures and maximum current capacity
- Integrated dual soft grips ensure the handle remains in place with minimal grip pressure
- Positioning of the torch is made easier by the combination of knuckle joints and a flexible leather section covering the first 31.5 in. (800 mm) of the torch immediately behind the handle

^aHard Body Torches with HFC (high temperature fiber reinforced composite material) provide the best performance, heat resistance, abrasion resistance, and high frequency resistance. ^bRubber bodies provide improved resistance to breakage in rough-duty.

ESAB has made a model change on the HW-9 series torches. The new designation for that series of torches is HW-90.

ESAB has made a model change on the HW-20A series torches. The new designation for that series of torches is HW-9.

Old Designation	New Designation
HW-9	HW-90
HW-20A	HW-9
HW-20AR	HW-9R
HW-20AF	HW-9F
HW-20ARV	HW-9RV
HW-20ARV2	HW-9RV2

HW-24 Torch Family - 80 Amp

Gas-Cooled Torches

- Designed to reach into tight places
- Ideal for confined, cramped areas
- High flexibility, one-piece cable
- Miniature head provides maximum accessibility to corners and tight joints
- Excellent visibility
- Gas lens available for improved shielding

Gas Lens

To meet increasingly stringent weld quality standards, we developed the patented GENUINE HELIARC Gas Lens. This stack of concentric, fine-mesh stainless steel screens produces an exceptionally stable stream of shielding gas (see Figure 1). By forcing the gas into a coherent stream, an effective shielding pattern can be projected greater distances (see Figure 2).

Patented Genuine Heliarc Gas Lens

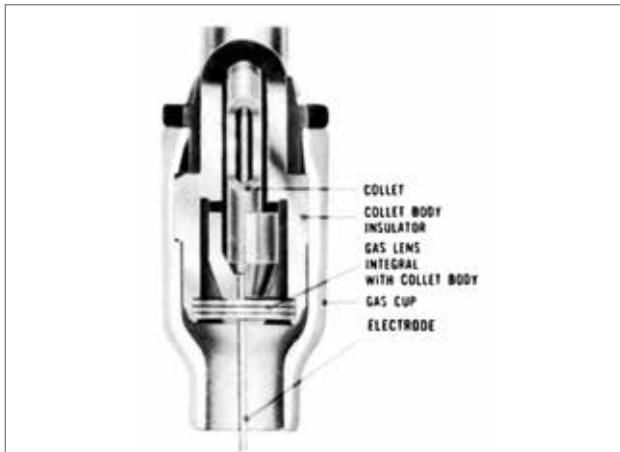

FIG. 1

Welding is possible at nozzle distances up to 1 in. from the plate surface, allowing greater welder visibility and access to tight joints.

Extending the electrode from the gas cup also increases the current capacity of some torch models. For example, a gas lens increases the 100 percent duty rating of our popular Heliarc HW-18 torch from 300 to 375A.

Conventional Torch

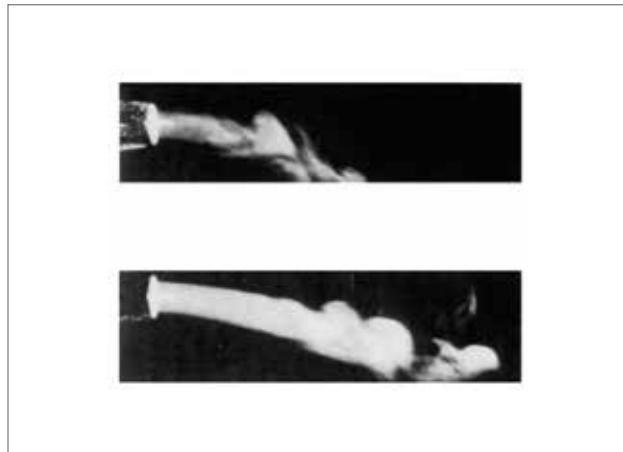

FIG. 2

Genuine Heliarc® Accessories

High Impact Cups

Made from high strength alumina, these high-impact cups have very good electrical insulating properties and exceptionally high impact resistance, heat resistance,

Ceramic Cups

Made from Grade "A" lava materials are less impact and heat resistant than the high-impact cups, but can be expected to give very good service and long life. They perform very well in confined areas where excessive heat is reflected back into the nozzle. These cups can be used at currents up to 250A DC or AC, depending on arc time and cup size.

Arc
Equipment

MiniArc® 161LTS

- The MiniArc 161LTS Automatic Primary Select operates on either 115V or 230V and will automatically configure to the primary input supplied
- Fixed hot start - allows the operator to easily strike an arc without the electrode sticking to the plate
- Fixed arc force - allows the operator to get deeper penetration into the plate without the electrode sticking to the plate
- LiftArc™ TIG gives you the luxury of lifting the tungsten as opposed to traditional scratch starting which can deposit tungsten into the plate resulting in contamination
- Able to use cellulosic 6010 electrodes with ease
- 18 lbs. (13.6 kg) weight - makes this unit portable and easy to carry directly to the job
- Comes with a shoulder strap
- Includes 10 ft. (3 m) work cable with clamp, and 10 ft. (3 m) welding cable with electrode holder
- Thermal indicator prevents the machine from exceeding the duty cycle and from becoming damaged if airflow is blocked
- Simple interface - amperage knob, process switch and on/off switch on front panel of unit
- Small and portable, inverter based
- 5A to 160A current range for DC welding

Caddy™ Arc 201i

1Phase DC CC 3 100%
YEAR
WARRANTY

- Caddy Arc features built-in, advanced inverter technology to deliver unparalleled performance in a rugged, portable package
- Adjustable hot start makes it easy to strike the electrode and avoid starting problems
- Adjustable arc force sets the intensity of the arc improving weld quality
- ArcPlus II improves welding characteristics and simplifies work producing better weld quality with less clean up
- Caddy Arc supplies direct current and allows you to weld most metals including alloy and non alloy steel, stainless steel and cast iron. The Caddy Arc 201i welds electrodes up to 5/32 diameter
- For GTAW applications with the Caddy Arc, all you need is a torch with a gas valve, gas regulator, and cylinder of gas
- Features compact design with impact resistant polymer and aluminum casing – makes the unit lightweight and easy to carry
- Small size does not compromise vital cooling of internal components
- Large heat sinks and innovative design make this Caddy machine run cooler – promotes longer machine life even when used in harsh environments
- Built in accordance with IP 23 for outdoor use, even in wet-weather conditions – makes this machine ideal for on-site work
- Equipped with a PFC (Power Factor Correction) circuit – allows the machine to perform a full range of functions on a 16 A fuse, protects against fluctuating input voltage, and makes it safer to use with a generator
- The advanced Caddy A33 panel features digital display with hot-start and arc force control for fine tuning, SMAW or GTAW selection, LiveTig start, two memory settings and remote control

Origo™ Arc 410c & 650c

3Phase DC CC 3 YEAR
100%
WARRANTY

- Sturdy, robust switching converter (chopper) power sources intended for manual heavy-duty welding processes - SMAW (with coated electrodes), GTAW, and air carbon arc gouging (ACAG)
- These machines are built with proven technology, for the highest level of reliability and outstanding welding performance
- Strong metal housing makes Origo Arc ideal for use in harsh industrial environments
- Wide current range makes it easy to optimize settings, allowing the machine to be used with an extensive range of consumables
- These units are equipped with functions such as hot start, arc force, and anti-stick; also adjust parameters during the welding process
- The units have vertical static characteristics, which means that regardless of cable length and arc voltage, the current remains constant
- The dynamic characteristics of the Origo Arc ensure a stable, spatter-free arc, and an easily controlled molten pool
- Due to the high power factor, energy consumption is low, and installation costs can be kept to a minimum
- The welding properties of the Origo Arc units are configured to meet the requirements of welding with cellulosic electrodes
- The arc is very flexible when starting from the lowest currents
- When the arc is shortened, arc force makes weld penetration easier - especially when the electrode is pressed against the welded material
- Origo Arc 410c and 650c are equipped with the A12 control panel - a full-featured control panel with a V/A instrument and a receiver for wireless current setting
- As an option, the Origo Arc range can be equipped with remote control
- Automatic switch-off prevents overheating

Warrior™ 500i

with Warrior Feed 304

3Phase DC CVCC

- Designed with input from real-world welders and built with ESAB's leading-edge engineering
- Multi-Process - Warrior is designed for GMAW, FCAW (Flux-Cored), SMAW, and GTAW applications, as well as ACAG (Arc Gouging), and delivers up to 500A @ 60% duty cycle
- Welds .030-.5/64 in. (0.8-2.4 mm) flux cored and solid wires
- Great short arc performance with 500A
- Full range of SMAW capabilities with excellent 7018 and 6010 performance
- Arc gouges with electrodes up to 3/8 in. (5 mm)
- Inverter technology - increased energy efficiency and more power from a lighter, smaller, and more portable unit
- Generator friendly - compatible to work with generators when power is not accessible in the field
- AutoFan™ feature reduces energy consumption and dirt intake
- High duty cycle for long runs across a variety of applications
- Automatic Hot Start/Variable Arc Control allows the welder to fine-tune the arc to get best possible weld performance and optimize hot start, arc force, and inductance settings with total arc control
- Power, gas, and control cables are in an all-in-one bundle with quick disconnect plugs to reduce setup time, housed in a tough, protective cover for longer cable life
- All controls, including power switch, are located on the all-in-one front panel
- Read-anywhere display - easy to read settings outdoors and from a wide range of angles
- Ergonomically designed handles, built to withstand mechanical hoisting
- Durable and rugged - IP 23 rating for outdoor and indoor use in rough environments

Origo™ Mig 652c

with Origo Feed 304 M13u

3Phase DC CVCC 

- The Origo Mig 652c meets the demands of the cost-conscious fabricator for high productivity, versatility, and high quality production with low overall welding costs
- The wide current and voltage range together with stepless, dial adjusted inductance make it easy to optimize settings for a wide variety of filler metals and gases
- Multi-voltage - ready to work anywhere
- Robust power technology and digital V/A meter
- Stepless voltage control - for precise settings and remote control (optional)
- Large wheels, undercarriage and sturdy lifting eyelets allow the Origo Mig 652c to be lifted by a forklift
- Sturdy galvanized metal casing with air filter (optional)
- Durable and rugged - IP 23 rating for outdoor and indoor use in rough environments

Ordering Information

Origo Mig 652c, 230/440-460V, 3ph* 0349312380

Origo™ Mig 652c

with Origo Feed 304 M13u

Origo Feed 304 M13u

- Remote voltage control, allows local setting of power source voltage output
- Wire feed speed, accurate graduated dial shows settings in 50 ipm (1 m/min) increments
- Adjustable burn-back time to correct stick-out and reduce wear of contact tips
- 2/4 stroke, helps minimize operator fatigue by optionally selecting trigger lock in the 4-stroke mode
- Inching/Gas Purge - inching eliminates unsafe trigger pulls to load wire; gas purge ensures a clean start with pure shield gas
- Creep start - simplifies start/stop and gradual feed of wire to optimize the starts.
- Quick connectors - shortest possible set-up times; no tools required to change feed rolls, connect gas hose, weld cable or control cable
- With its galvanized metal casing, the Origo Feed is ideal for use in tough environments
- Electronically controlled feeding gives accurate and stable arc
- The four wheel roll feeder mechanism with grooves in both feed roll and pressure roll gives stable feeding and low wear on the wire - to avoid operational disturbance
- The feeders are available with either 1.18 in. (30 mm) rolls for wires from .023 in. (0.6 mm) up to 5/64 in. (2.0 mm)
- All operating adjustments are made on the front panel of the feeder, giving a good overview of the settings
- The front panel of the M13u is equipped with switches for inching/gas purge, 2/4 stroke and creep start
- A wire feed speed knob with accurate graduated dial and adjustable burn-back are included
- A remote voltage control is provided with 10 graduations from min. to max. settings
- The panel is easy to operate with accurate setting that suits different needs and demands
- Extra versatility can be provided by utilizing one of the following mounting options for the Origo Feed: counterbalance & mast, wheel kit or hanging bracket

Origo™ Mig 4002c, 5002cw & 6502c

with Origo Feed & Aristo Feed

3Phase DC CVCC 

- Origo Mig multi-voltage power sources operate with Origo Feed and Aristo Feed wire feeders
- Proven technology and ESAB-developed software, for reliable, productive welding performance
- Each unit is constructed with a strong metal casing to withstand harsh environments
- Large wheels, sturdy lifting eyelets, and undercarriage make the unit easy to move
- A dust filter handles tough, dirty environments, and prevents grinding dust and metal particles from entering the chassis (optional)
- All adjustments are made on the man-machine communication panels (MMC) of the feeder, providing a good overview of the settings
- The feeders have rolls with a diameter of 1.18 in. (30 mm) for wires up to 1/16 in. (1.6 mm) diameter

Origo™ Mig 4002c, 5002cw & 6502c

with Origo Feed & Aristo Feed

Wire Feeder Options

Origo Feed 3004 MA23 - Basic

A sturdy, easy-to-use wire feeder with the features you need for reliable GMAW and SMAW applications.

- **2/4 stroke simplifies handling the welding torch**
- **Process select and gas pre/post flow**
- **Digital V/A meters**
- **Gas purge/wire inching**
- **Memory for 3 parameter sets**
- **Quick connectors – shorten setup times**
- **TrueArcVoltage™ system measures the correct arc voltage value independent of the length of the connection cable, or welding torch**

Origo Feed 3004 MA24 - Guided

The MA24 panel offers QSet™, a unique function that optimizes welding parameters in short arc for solid wire welding in stainless and carbon steels. Simply set the wire feed speed, and QSet will automatically select the correct welding parameters for the required wire/gas combination.

- **All of the features from the MA23, plus...**
- **Creep start provides a softer, more direct start with less spatter**
- **Crater filling**
- **Pre-programmed synergic lines ensure optimum settings with a wide choice of materials, wire dimensions, and gas combinations**

Aristo Feed 3004 U6 - Advanced

Aristo Feed units offer the ability to create synergic lines, allowing one-knob setup for welding with solid wire, cored wire, metal-cored wire, and various gas mixes. The feeder can also be set up for DC pulse and synergic pulse welding.

- **All of the features from the MA24, plus...**
- **Ability to create up to 60 synergic lines**
- **Memory for 10 parameter sets**
- **DC pulse and synergic pulse welding**

Aristo Feed 3004 U8₂ - Sophisticated

The U8₂ panel adds SuperPulse™ technology for exceptional heat control.

- **All of the features from the U6, plus...**
- **230 pre-programmed synergic lines**
- **Memory for 255 parameter sets**
- **SuperPulse – for superior control of heat input**
- **Remote operator pendant**
- **Ability to create your own synergic lines**

Aristo® Mig 5000i/U5000i

with Aristo Feed

3Phase DC CVCC 

- Multi-process; GMAW, pulse GMAW, SMAW, GTAW, Pulse GTAW and carbon arc gouging
- The ideal welding package for efficient production or pre-fabrication of high demand applications with high alloyed materials
- Chassis made of extruded aluminum sections; Alutech™, a robust material that withstands rough treatment
- The power source is based on inverter IGBT technology that provides reliable equipment with outstanding welding characteristics
- The control and communication CAN-bus system means less cables, increasing operational reliability
- The power source is optimized to operate together with Aristo Feed 3004w U6 and U8 wire feeders
- Define and store customized synergic lines for any material or gas combinations; memory for 10 (U6) or 256 (U8) welding parameters
- Connection cables up to 115 ft. (35 m) provide a working radius of up to 115 ft. (35 m)
- The TrueArcVoltage™ System guarantees welding with the correct arc voltage independent of any voltage drop in the welding cables; same arc voltage and weld result whether setup with a short connection cable and 10 ft. (3 m) gun or 115 ft. (35 m) working radius
- Dust filter handles tough, dirty environments and avoids grinding-dust and metal particles inside the chassis
- Aristo SuperPulse process with the ability to control the heat input (U8 Pendant)

¹Used with Aristo Feed U8₂ & M0 wire feeders.

²Used with Aristo Feed U6 wire feeder.

Arc
Equipment

Specifications

Aristo Mig 5000i, U5000i, U5000iw

Input voltage:	460V, 3ph, 60Hz
USA	208/230/460/575V, 3ph, 60Hz
Canada	
Fuse slow, A	35
Setting range, DC:	
GMAW	16-500/8-60
SMAW	16-500
GTAW	4-500
Permitted load at:	
60% duty cycle	500/39
100% duty cycle	400/34
Open circuit voltage, V	68-88
Energy save mode, W	50
Input power, kW	23
Power factor at max current	0.85
Efficiency at max current, %	86
Control voltage, V, Hz	42, 50/60
Dimensions, LxWxH, in. (mm):	
Without cooling unit	25 x 16 x 20 (625x394x496)
With cooling unit	25 x 16 x 31 (625x394x776)
Enclosure class	IP 23
Insulation class (main trafo.)	H
Operating temperature, °F (°C)	32 to 104 (-10 to 40)
Weight, lbs. (kg)	152 (69)
Application class	S
Standards	IEC/EN 60974-1, EN 50199

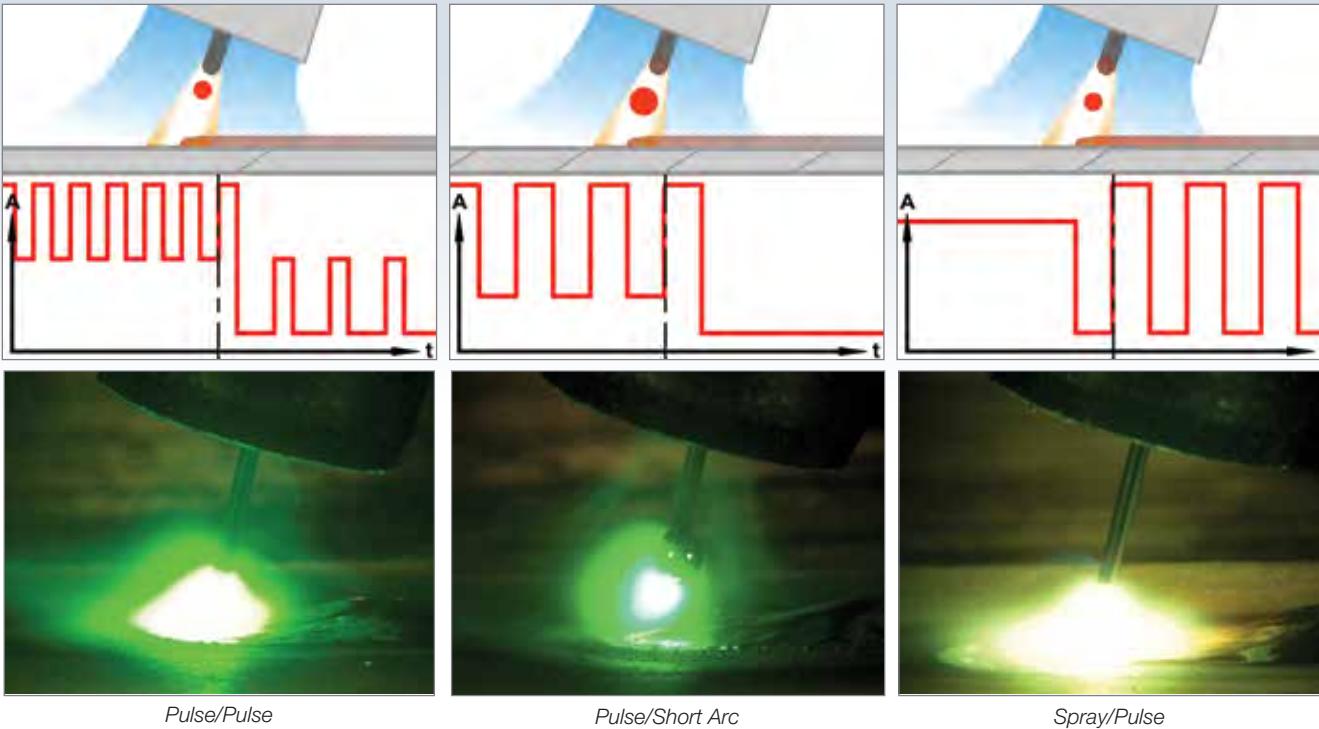

Water Cooling Unit

Cooling capacity, W, gal/min (L/min)	2500 at 104°F (40°C), 0.4 (1.5)
Coolant volume, gal/min (L/min)	1.4 (5.5)
Max flow, gal/min (L/min)	0.5 (2.0)
Max pressure, psi (bar)	50 (3.4)
Weight, lbs. (kg)	44.1 (20)
Dimensions, LxWxH, in. (mm)	25 x 16 x 11 (621x389x266)

Aristo® SuperPulse™

Innovative process for heat input control

Arc
Equipment

Aristo SuperPulse is a further development of the Pulse/Pulse concept, giving full control over the heat input and thereby expanding the scope of application of the GMAW process. In addition to Pulse/Pulse, the following arc mode combinations and applications are possible:

- Pulse/Short Arc enables the welding of very thin sheet metal
- Productive welding of root passes replacing the GTAW process
- Spray Arc/Pulse - very efficient arc mode for positional welding of thick materials
- Aluminum can be welded straight upwards, without weaving
- GMAW brazing of very thin sheet material

Aristo SuperPulse Benefits:

- Easier positional welding
- Uniform penetration
- Less sensitive for root gap variations
- Less sensitive for unequal heat transfer
- GTAW weld appearance with the GMAW process
- Suitable for automated welding, e.g./with Railtrac and Miggytrac automated welding tractors
- Extends the working range for larger wire sizes
- With its precisely adjustable heat input and depth of penetration, Aristo SuperPulse can solve difficult welding tasks and increase productivity

MobileFeed 300AVS Wire Feeder

- Arc voltage feeder for use with DC, CC or CV power supplies with straight (DC-) or reverse (DC+) polarity operation - no switches to set
- Ideal for harsh environments such as pipelines, shipyards, offshore, general fabrication and more
- For use with 8 or 12 in. (203-305 mm) wire spools for enhanced portability, smaller size and reduced weight
- Enclosed, super impact-resistant case protects against dirt, metal grit, and moisture as well as extreme abuse, from grinding sparks, corrosive chemicals, drops, and more
- 'CC' Euro torch connection for fast setup - no external gas hose or trigger wire
- Heavy-duty 4-roll feed unit with PWM drive provides powerful, dependable wire feeding with automatic slow wire run-in, and Electronic Dynamic Braking for overall improved operation
- Safety features include insulated case, secondary contactor, low voltage torch trigger circuit, and overload protection
- Designed to meet the most rigid standards - meets IEC-974-1 specifications

Arc
Equipment

Ordering Information

MobileFeed 300AVS 0558005729

Includes: gas solenoid, contactor, and dual groove feed rolls.
Uses LC-40 type cable connector.

Options & Accessories

OKC50 Connectors [2 in. (50 mm)]

OKC female cable connector, 1/0-4/0 cable 13735631
OKC male cable connector, 1/0-4/0 cable 13732513

LC40 Cable Connectors

LC40 cable connector set (male/female), 1/0-3/0 81F25
LC40 male cable connector, 1/0-3/0 81F26
LC40 female cable connector, 1/0-3/0 81F27

Spool Adaptors

Use for adapting to 8 in. (203 mm) diameter spools .. 17511
Use for adapting to 10 in. (254 mm) diameter spools 34330

Gas meter (measures gas flow at the gun) 19043

Specifications

MobileFeed 300AVS	
Wire speed range, ipm (m/min) ¹	50-800 (1.8-20.3)
Permitted load at 100% duty cycle	400A
Wire diameter capacity, in. (mm)	.023-5/64 (0.6-2.0)
Wire spool capacity, in. x lbs. (mm x kg)	12 x 44 (305x20)
Primary input (open circuit voltage or arc voltage) Minimum Maximum	16.5 VDC 100 VDC (113V peak)
Weight, lbs. (kg)	32 (14.5)
Dimensions, LxWxH, in. (mm)	20.7x8.6x17.2 (217x437x526)

MobileFeed 300AVS will fit through 18 in. (457 mm) dia. hole. Not for use with AC power sources.

¹Actual speed range depends on the arc voltage.

MobileFeed 300AVS Wire Feeder

Two lower drive rolls are required for four roll drive systems. Use flat, smooth pressure roll(s) #23612397 supplied with wire feeder.
¹As delivered on #0558005729.

Wire Feeder Accessories

Arc
Equipment

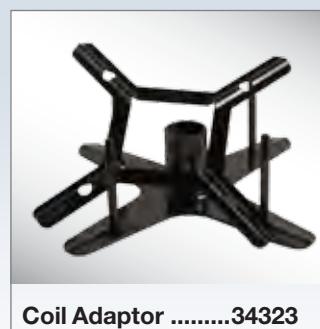

Wheel Kit.....0458707880

Increases the working radius from the power source. The wheel kit has four wheels and can also be placed to pivot on the power source.

**Quick Connector Marathon
Pac0558002354**

Allows connection of QCA Adaptor to Aristo Feed inlet.

Coil Adaptor34323

**Strain Relief for Welding
Torch0457341881**

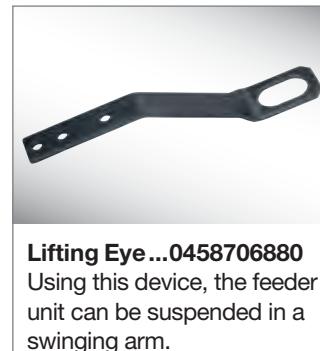

Recommended in combination with wheel kit.

**Adaptor for 11-lb (5 kg)
Spool.....0455410001**

**Miggytrac/Railtrac Remote
Adaptor for CAN feeders
MA23, MA24, U6,
U82/M00459681880**

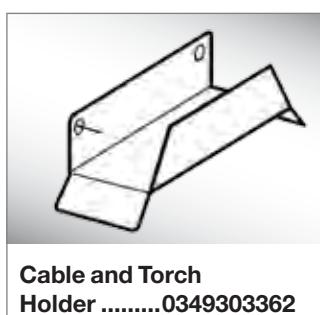

Lifting Eye...0458706880
Using this device, the feeder unit can be suspended in a swinging arm.

**Feeder Strain
Relief for Connection
Cables0459234880**

**Steel Spool
Cover.....0459431880**
12 in. (305 mm) spools.

**Cable and Torch
Holder0349303362**

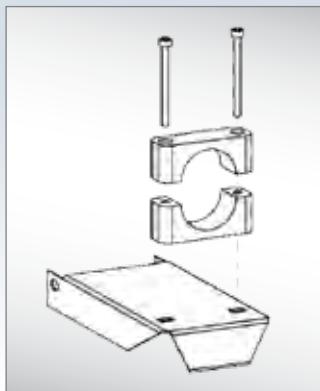

**60 lb Coil Extension
Bracket0459233880**
For use with coil adaptor.

Wire Feeder Accessories

**Counter Balance
MiniBoom ...0458705880**
The feeder unit is assembled with a spring unit which lifts the welding torch and hose with adjustable force. The lifting force is independent of the weight of the wire spool. The device can be rotated through 360°.

**Power Source Strain
Relief for Connection
Cables.....0349311700**
Recommended when moving power supply frequently and use of long connection sets.

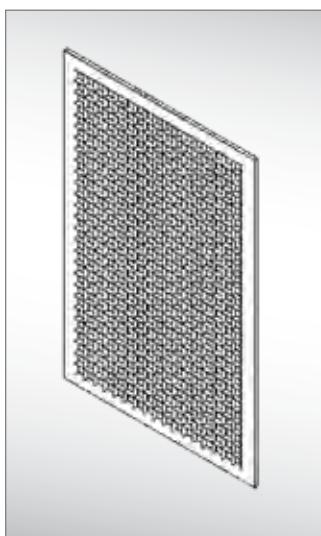

**Remote Control
MTA1 CAN...0459491880**
(Requires remote connection cable)
CAN-based, multi-function remote control for the control panels MA23, MA24.

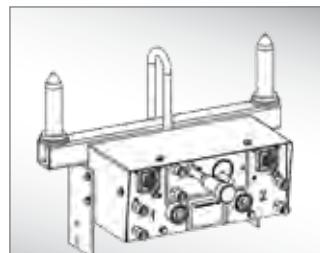

**Electrode Holder
Assembly QD21226**

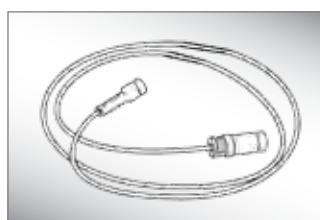

**Remote Control M1
10Prog.....0459491882**
(Requires remote connection cable)
CAN-based Synergic MIG for control panel MA23, MA24, U6, and U8₂ Plus.

Air Filter0349302252
Cleanable/reusable, optional filter. Extends time between required maintenance and protects components in harsh environments. For use with Origo Mig 4002c/5002cw/6502c.

**Feed
Selector0349301152**
Allows the use of the two 3004 feeds M0 with a U8₂ Plus on MIG 4002c/5002c/6502c.

**Remote
Connection Cable
for CAN0459960880**
(Requires MTA or M1 10Prog CAN remote) CAN 4 pole - 10 pole 16.4 ft. (5 m).

Counterbalance MiniBoom

Arc
Equipment

- Up to 25 ft. (7.6 m) working radius - effective area of over 1900 sqft. (579 m²)
- 350° working envelope
- Mounts easily to power source, inverter cart or stationary pedestal
- Adjustable boom length
- Adjustable counterbalance spring

Ordering Information

Counterbalance MiniBoom

12 in. (305 mm) 44-lb. (20-kg) coils	0458705880
18 in. (457 mm) 65-lb. (25.5-kg) coils	0458705882

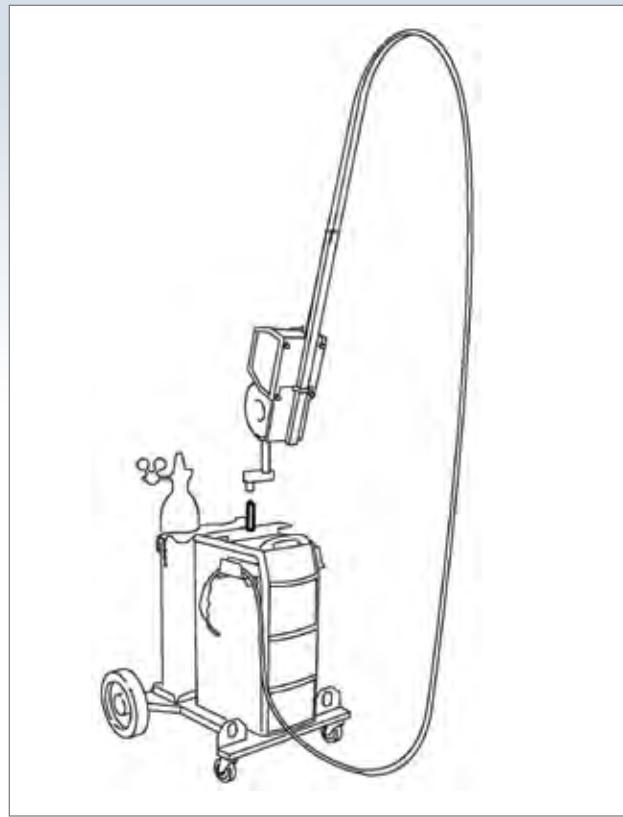

For Origo Feed, Aristo Feed, and Warrior Feed wire feeders.

Aristo Mig trolley and dual cylinder rack.....	0458603880

¹Required to add MiniBoom power source indicated.

²Required with no cart.

Aristo Mig power source, Aristo Mig wire feeder, 25ft. (7.6 m) torch, MiniBoom and Trolley Cart with 2 gas cylinder capacity shown.

Balanced Boom Assembly

- Extends a 12 ft. (4 m) or 15 ft. (4.5 m) torch's reach from a 20 ft. (6 m) radius up to a 31 ft. (9.5 m) radius
- 350° envelope of operation in most uses
- Boom adjusts from 50° up to 6° down from horizontal position, can be used for tall weldments
- Fully balances feeder weight for fingertip control of feeder height, no lever jacking
- Mast has 6.5 ft. (2 m) clearance from floor to boom support pin
- Standard mounting directly to concrete floor
- Pallet and cart mounting options available
- Extremely rugged steel construction for years of continuous use
- Weld parameters easily adjustable on the standard feeder at the end of boom
- Wire spools mountable to mast or feed wire from Marathon Pac

Ordering Information

Balanced Boom Assembly

8 ft. (2.4 m), B-8/FHD	0558004002
10 ft. (3 m), B-10/FHD	0558004006

To extend work cables and can be used as MobileFeed electrode cables.

General Accessories

Ground Clamps

- ESAB ground clamps provide the largest workpiece-to-contact area of any clamp on the market
- They assure positive connections and slide easily under steel plate
- Ground clamps help eliminate arc blow, make it easy to change ground location, and assure proper voltage for maximum weld results with all rods

Model	Part Number	Amp Capacity	Type Cable Connection	Weight
200	81F11	200	Mechanical Oval-Point Screw	13 oz.

 15 ft. (4.5 m) work cable, 2/0AWG¹ 0558001440

¹Work cables include work clamp.

Cable Connectors

- ESAB cable connectors offer many advantages over older styles. Metal parts are precision machined from heavy, specially shaped brass extrusion. Cam action design of male half connector pulls the two halves tightly together. Connector covers are molded from a special heat and cold resistant material. Covers have no metal liner to rust or corrode. Easily installed with a 1/4 in. Allen wrench.

Model	Part Number	Cable Connection	Cable Capacity	Weight	Std Pack
LC-40	81F25	Oval-Point Screw Mech.	1/0 thru 3/0	17 oz.	1
Same connector style as above - only one half of the set					
LC-40	81F26	Male half	1/0 thru 3/0		
LC-40	81F27	Female half	1/0 thru 3/0		

Electrode Holder

- Curved upper lever with low angle design for better hold. Firm electrode grip, fully insulated, high strength spring. High leverage tong designed for easy opening. Heavy-duty shockproof handle.

Part Number	Amp Capacity	Electrode Capacity, in.	Cable Capacity	Length in.	Weight oz.

Plasma
Equipment

From the Market Leaders

Since ESAB developed the Plasmarc process in 1957, we have introduced a number of innovations to ensure peak performance in plasma cutting and gouging.

Today, ESAB's Plasmarc product line includes a full range of systems designed to meet your specific needs and applications.

From compact, portable packages to heavy-duty, industrial systems, ESAB plasma cutting equipment offers cutting capacities from 1/8 to 4 in. (3.2 to 101.6 mm).

With their advanced inverter technology, ESAB's portable and transportable machines provide all the cutting power that normally requires larger, heavyweight consoles.

The versatile Deuce Pack 150 system offers 300A of heavy-duty cutting and gouging power for a variety of industrial applications - plus it can be separated into two 150A consoles for smaller scale operations. Also available are a variety of advanced ESP (ESAB Smart Plasma) heavy mechanized systems for high quality cutting in automated applications.

ESAB's commitment to plasma performance is carried through in the high quality Plasmarc torches and consumables. From the innovative PT-31XL, the most compact 50A torch available on the market with the capacity to cut up to 1 in. (25.4 mm), to the PT-26, with a 4 in. (101.6 mm) cutting capacity with air, N₂ or H-35, shielding gas, our torches are designed for superior cut quality and maximum operator comfort. And ESAB's patented XT tips boost performance and extend consumable life.

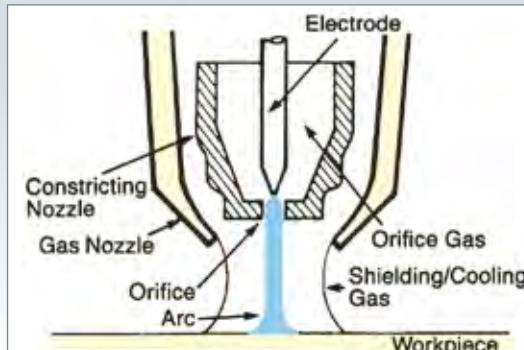

Plasmarc gouging outperforms other conventional gouging methods. Because it produces substantially less smoke and fumes, it significantly decreases operator exposure to air contaminants. In addition, Plasmarc gouging is faster, cleaner, less expensive, and more accurate than other gouging processes.

Process Description

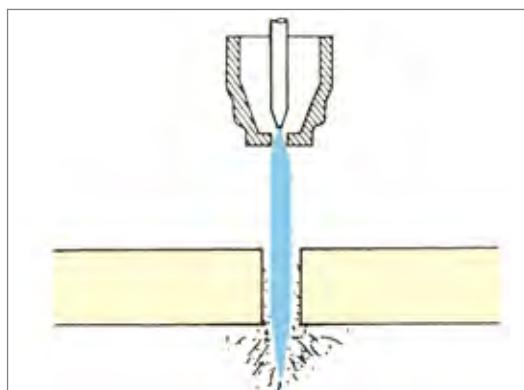

In our patented Plasmarc process, an electrode is built into the torch nozzle, which has an arc constricting orifice. Plasma gas, usually air, is fed through the nozzle where it is heated to the plasma temperature range - as high as 50,000°F (27,760°C). The plasma arc that emerges from the orifice is hot enough to melt any metal.

Because Plasmarc cutting is a relatively simple operation, it is widely accepted for cutting ferrous and non-ferrous metals. The plasma arc's straight, narrow, column-like shape and high current density allow the operator to achieve cut consistency without maintaining a constant distance between the nozzle and the workpiece.

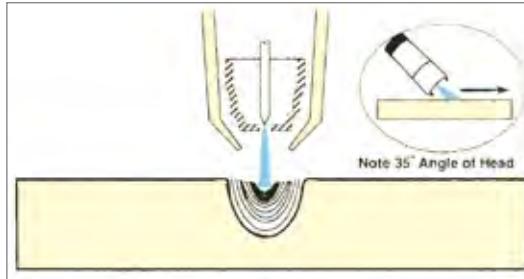

Plasmarc gouging is a variation of the Plasmarc cutting process. The torch nozzle configuration is designed to produce a lower velocity, broader arc. Rather than cutting completely through the metal, the torch is held at an angle so the arc gouges a U-shaped groove in the metal.

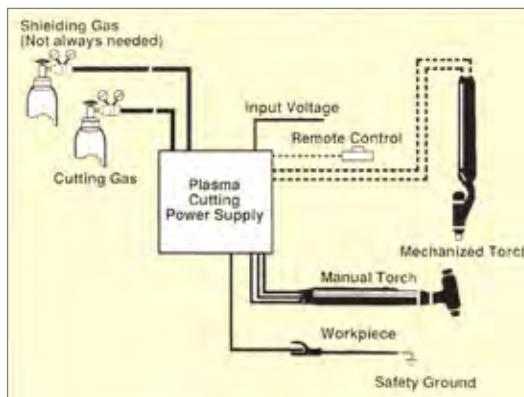

Plasma Arc Cutting

Plasma Arc Gouging

Plasma Arc Cutting

Plasmarc® Processes

Plasmarc cutting involves using a torch, compressed gas, and a source of electric power to create a constricted arc that melts a localized area of metal and removes the molten material with a high-velocity jet of hot, ionized gas.

During Plasmarc cutting, a compressed gas and an electric arc are simultaneously passed through a small orifice, which is typically 0.040 in. (1.0 mm) to 0.125 in. (3.18 mm) in diameter. An electric arc heats the gas to a plasma state at a temperature as high as 50,000°F (27,760°C). This super-heated plasma jet is directed to the area to be cut, and the jet melts a path through the metal. Because it is a melting process, a Plasmarc can cut almost any commercially used metal.

Plasmarc cutting can be accomplished manually or mechanically. In mechanical setups, a Plasmarc torch is driven by an automatic machine that is typically regulated by a computer numerical control (CNC) to cut a predetermined shape. This article focuses on manual Plasmarc cutting, in which the Plasmarc torch is manipulated by hand to perform a variety of metal cutting tasks.

Manual systems are available in a variety of sizes. Generally rated in amperage output or cutting capacity, the units range from about 15 to 300A output, encompassing a cutting capacity ranging from 1/4 in. (6.35 mm) to approximately 4 in. (101.6 mm).

Manual units can also be divided into two general categories. Stationary or console systems generally are designed to remain fixed in one place, although most are equipped with wheels that make it possible to move them around a shop. Portable systems are designed to be carried around by one or two workers, allowing them to move the system where it is needed rather than taking materials to be cut to one location.

Most of these systems use ordinary shop compressed air as the plasma cutting gas, provided it is not too wet, dirty, or oily. Some systems can also use other compressed gases such as Nitrogen or Argon/Hydrogen mixtures for certain cutting tasks involving non-ferrous metals.

Typical Cutting Needs

In most sheet metal shops, a variety of metal cutting chores must be accomplished, and the need often arises to cut unique or low-production shapes, modify a part, do prototype work, or modify a part in the field. Several options besides plasma cutting are available to accomplish these cutting tasks. "Nibblers" are relatively inexpensive and can cut shapes and contours. They may run slow on thicker materials, however, and they may distort the metal or leave scalloped or rough edges.

"Shears" are quick and leave a smooth edge, but they are restricted to cutting straight edges. Similarly, circular saws leave reasonably good quality straight edges, but they are limited to cutting straight lines. Saber saws are not limited to cutting straight lines, but they may run slower and are most suitable for thinner materials.

Oxyfuel cutting may not be suitable for use on gauge-thickness materials because the preheating that is necessary, and relatively low travel speeds, combine to place a considerable amount of heat in the steel, which can cause severe distortion of thinner materials. It is also limited to use on carbon steel, because other metals create high melting point oxides that interfere with or stop the burning process of oxyfuel cutting. However, oxyfuel cutting is considered a better choice for cutting carbon steel thicknesses of more than 1-1/2 in. (38 mm) because it is faster.

The travel speed of oxyfuel is determined by the propagation rate of the burning reaction, which is relatively independent of the steel thickness. Typically, it is in the range of 20-25 ipm (508-635 mm/min). Plasma melts its way through a material, however, so the cutting speed is determined by material types and thicknesses. Typical plasma cutting speeds can range from 5-100+ ipm (127-2540+ mm/min).

An appropriately sized manual Plasmarc cutting unit can handle most cutting chores. The unit can cut contours and straight lines. Most units can follow a template or straight edge, so cutting does not necessarily have to be entirely freehand. In addition, circle cutting or other torch-guide attachments can aid in cutting particular contours. If a Plasmarc unit is sized properly for a job, cutting speeds should be about 15 ipm (381 mm/min) or higher, which helps maintain good production rates while minimizing heat distortion of a workpiece. The resulting edge quality can vary, however, depending on the particular plasma unit being used, the material being cut, and the operator's skill. Typically, using air as the plasma gas while cutting carbon steel helps produce straight and relatively smooth edges. Any slag or dross that accumulates on the bottom of a cut knocks off easily. Air can also be used as the plasma gas for cutting stainless steel and aluminum, but some oxidation will occur on the resulting edges. Aluminum develops a rough appearance, and stainless steel becomes somewhat discolored. However, using an inert gas such as Nitrogen or Argon/Hydrogen instead of air as the plasma gas can eliminate these problems.

For cutting chores beyond the gauge thickness range, manual plasma is often a suitable choice. Plasmarc cutting units can cut, trim, or remove carbon steel as thick as 4 in. (101.6 mm).

Plasmarc® Processes

Plasma uses no open flame, and no compressed gas cylinders are needed if air is used as the plasma gas. Still, oxyfuel cutting is usually considered to be a better choice for carbon steel thicknesses of more than 1/2 to 2 in. (12.7 to 50.8 mm) because of its speed.

For thicker stainless steels, as well as cast iron and high-alloy steels, plasma cutting may be the only practical cutting option. The tough composition of stainless steels makes cutting them by mechanical means difficult. Again, if the cut face must not be discolored or oxidized, gases such as Nitrogen or Argon/Hydrogen should be used instead of air.

Cutting Capability

Choosing the right manual plasma unit for your particular application can be perplexing if you are unfamiliar with manual plasma cutting. Once you understand the basics, however, the job becomes easy. No industry standard exists for rating the thickness cutting capability of a manual plasma unit. However, cutting thickness claims made by most major manufacturers are usually accurate.

First, determine the maximum thickness you plan to cut regularly. This thickness should be in the mid-range of the unit's cutting capability. This is important because:

1. When tackling their maximum cutting thicknesses, most manual plasma units have slow travel speeds, typically less than 12 ipm (304.8 mm/min).
2. The higher cutting current of a larger-rated unit inhibits dross or slag formation on the bottom of the cut on carbon steel, producing a cleaner cut.
3. The reserve cutting capacity provides the capability to cut thicker materials if the need arises.

Be careful to judge a unit by its actual cutting capability and not by its electrical current rating, because different designs deliver dissimilar cutting performances from the same amount of current. You should also remember that most cut thickness ratings are based on cutting carbon steel.

Another consideration in selecting a unit is portability. Most units available with 1 in. (25.4 mm) or lower capacities are designed so that one or two workers can transport them around a plant or job site.

Most plasma arc cutting units rated at more than 1 in. (25.4 mm) capacity cannot be transported easily, but they may be wheeled about a shop or transported with a lift truck or hoist.

The Cutting Torch

One of the most important considerations in choosing a system is the front-end design of the plasma arc cutting torch, because it controls the cut and most heavily influences the operating costs of the setup. If reaching tight places is important, a torch with a small or narrow front end is a good choice. A smaller front end may also be a better choice in applications that require a clear line of vision to follow a cut line, because a larger front end could obscure vision.

In addition to the up-front costs for nozzles, electrodes, and other front-end parts, you should consider the durability of the parts and the life in arc hours you can expect from the nozzle and electrode combination. These factors are better indicators of operating costs than are the prices of the parts alone.

Plasmarc cutting torch parts are generally made to very high tolerances. Make sure that any replacement parts you use are made to proper specifications. The wrong replacement parts can result in poor performance and damage to the torch head, which could require an expensive repair.

Recommended Cutting Gases

Compressed Air is the most commonly used gas for lower current plasma cutting and works well for most metals from gauge thickness to 1 in. (25.4 mm). It leaves an oxidized cut surface. Compressed air can also be used for plasma gouging on carbon steel.

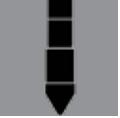

Nitrogen (N₂) is often used for higher current plasma systems and for cutting materials up to 3 in. (76.2 mm) thick. It produces excellent quality cuts on most materials.

Oxygen (O₂) is used when the highest quality mechanized cuts are desired on carbon steel up to 1-1/4 in. (31.75 mm) thick. The cut face is smooth, and dross is easy to remove. Oxygen can also be used on stainless steel and aluminum, but it produces a rougher cut face.

Argon-Hydrogen Mixtures (H-35) are generally used for cutting stainless steel and aluminum. They produce a clean, high quality cut face. Argon-Hydrogen is required for mechanized cutting of any material more than 3 in. (76.2 mm) thick. This mixture also provides an excellent gas for plasma gouging on all materials.

Finally, the best way to evaluate a manual Plasmarc cutter for your application is to ask for a demonstration. Many of the factors that determine which unit is right for you become obvious when you see the unit demonstrated in your own shop. Pay particular attention to cut speed, quality, ease of use, and portability, if that is an issue. If access is limited to an area to be cut, make sure that the cutter you evaluate can do the job.

Equipment

Important Product Safety

Sound common sense procedures must be followed for personal protection and operating efficiency when using arc welding equipment. Always comply with the manufacturer's recommendations for operating and maintaining the equipment, as set forth in the instructions provided with each unit. Also, be certain to use all applicable safety precautions, as described in *Precautions and Safe Practices for Arc Welding, Cutting and Gouging*, #F-52-529, which is available by contacting ESAB at 1-800-ESAB.123 or visiting esabna.com.

¹Gouging capability allows customers to perform gouging applications such as weld removal, repair, and back gouging.

Not all plasma machines in the market are suitable for gouging. They lack the necessary design attributes to offer this feature.

²Piercing is rated by half of the machine's rated capability. This is to give as much protection as possible to the life of consumables.

Proper technique can be found in the machine's instruction manual.

³The rated cut capacity chart is designed to help customers choose the machine that best fits their applications.

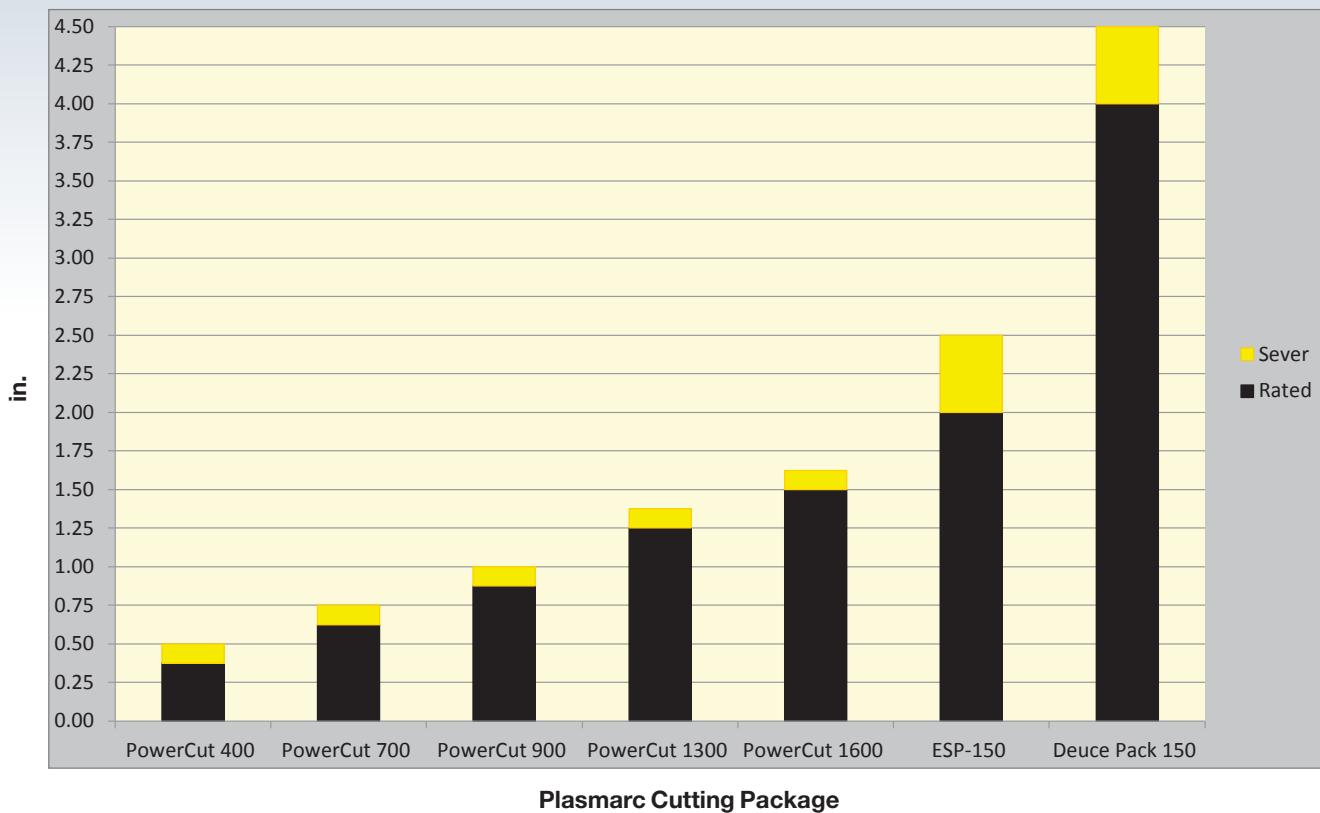

Rated cut capacity is based on travel speeds between 10 -15 ipm giving you a desirable cut face at an acceptable speed.

Plasmarc®

Equipment Selection Guide

Plasmarc Cutting Package Capabilities

Plasma
Equipment

PowerCut® 400

Designed with ESAB Plasmarc technology, PowerCut machines are more powerful and durable than any other machine in their class.

PowerCut makes plasma cutting easier and more economical, delivering reliability, high production, and a wide variety of performance features to simplify operations, reduce set-up time and enhance consumable life, so you spend less time troubleshooting and more time cutting.

- Manually cuts 3/8 in. (9.5 mm) and severs 1/2 in. (12.7 mm) - powerful cutting performance
- Compact, lightweight design for easy transport
- Adaptable voltage - adapt to 110V or 230V by simply changing the adaptor plugs provided
- Blowback technology eliminates high-frequency startups that can disrupt CNC controls and nearby computer systems
- Dynamic arc control - control the pilot arc when you need to cut grate or mesh material without arc outage
- Compatible to work with generators when power is not accessible in the field
- Ergonomic, lightweight torch handle design provides maximum comfort when tackling tough jobs
- Compact torch design with shorter front end allows maximum arc visibility in those hard-to-reach places
- Automatic air pressure - PowerCut 400 automatically sets your air pressure for you
- Voltage booster is useful for finishing off thick material with ease and also ideal for the inexperienced operator to cut in confidence
- Drag cutting capable - great for template cutting, straight edge cutting, and first time users
- Arrives fully assembled, ready to cut out of the box
- One-year warranty on torch

PowerCut® 900

Designed with ESAB Plasmarc technology, PowerCut machines are more powerful and durable than any other machine in their class.

PowerCut makes plasma cutting easier and more economical, delivering reliability, high production, and a wide variety of performance features to simplify operations, reduce set-up time and enhance consumable life, so you spend less time troubleshooting and more time cutting.

- **Durable external housing design is damage-resistant, corrosion-resistant, and weather-resistant, while remaining lightweight for portability**
- **Tool-less quick disconnect torch disconnects from the machine without the use of wrenches or special tools; easily disconnect your PT-38 torch for storage, repairs or replacement, or to attach a PT-37 mechanized torch for mechanized applications**
- **Easy-to-read digital display shows the exact pressure or amperage and help codes to assist in troubleshooting minor errors and reducing downtime, so you can operate with confidence**
- **Blowback technology eliminates high-frequency startups that can disrupt CNC controls and nearby computer systems**
- **Switch between modes automatically (gouge, grate, and normal modes), tailoring your application without manually changing settings on the console**
- **Sensitive internal electronics are suspended from the aluminum frame, insulating them from shock and vibration**
- **Silicone-sealed switches are immune to corrosion, as well as dust and dirt infiltration**
- **PowerCut delivers the extra output voltage needed for superior plasma gouging capability**
- **Automatic fan control - the cooling fan is automatically controlled to run only when necessary, conserving energy and reducing ingested dust and dirt**
- **Built-in power line conditioner protects against damage from power line noise and spikes, even with poor-quality power**
- **Torch wrap and spare parts kit holder lets you neatly fold up excess torch cables for convenient storage in your consumable box**
- **"Plug-n-Play" mechanized option lets you easily transform your manual cutting system into a powerful mechanized system for your gantry machine**
- **One-year warranty on torch**

PowerCut® 1300

PowerCut makes plasma cutting easier and more economical, delivering reliability, high production, and a wide variety of performance features to simplify operations, reduce set-up time, and enhance consumable life, so you spend less time troubleshooting and more time cutting.

- **Rugged design - durable external housing design is damage-resistant, corrosion-resistant, and weather-resistant, while remaining lightweight for portability**
- **Input voltage selector switch - conveniently located on back of the machine, lets you easily change input voltage from 208V to 460V**
- **Tool-less quick disconnect torch disconnects from machine for storage, repairs, or replacement without the use of wrenches or special tools, or to attach a PT-37 mechanized torch**
- **Digital readout display is easy to read and shows exact pressures or amperage and help codes to assist in troubleshooting**
- **Switch between gouge, grate, and normal modes automatically, tailoring your application without manually changing settings on console**
- **Delivers the extra output voltage needed for superior plasma gouging capability**
- **Torch wrap and spare parts kit holder is standard on all packages**
- **Blowback technology eliminates high-frequency startups that can disrupt CNC controls and nearby computer systems**
- **Sensitive internal electronics are suspended from the aluminum frame, insulating them from shock and vibration**
- **Silicone-sealed switches are immune to corrosion and dust and dirt infiltration**
- **Automatic fan control allows cooling fan to run only when necessary - conserves energy and reduces ingested dust and dirt**
- **Built-in power line conditioner protects against damage from power line noise and spikes, even with poor-quality power**
- **"Plug-n-Play" mechanized option lets you easily transform your manual cutting system into a powerful mechanized system for your gantry machine**
- **One-year warranty on torch**

ESP-101

The ESP-101 is a multi-purpose, 100A plasma cutting system for mechanized cutting at 100% duty cycle for enhanced productivity allowing for continuous operation even at maximum thickness.

Uses ESAB's Smart Plasma concept to provide a plasma cutting console that is ideal for a variety of mechanized cutting applications.

Equipped with the patented PT-37 torch, this system cuts up to 1 in. (25.4 mm) using air as the plasma and shielding gas.

Utilizing a blowback start and an electronically controlled pilot arc, the PT-37 sets a new standard for starting reliability, cutting characteristics, and consumable life.

- Utilizes a "drawn arc" to initiate the cut, which eliminates high frequency interference from the starting circuits
- Electronically controlled pilot arc provides for consistent starting and longer consumable life
- Gouging mode allows for higher operating voltages at a reduced current for demanding mechanized plasma gouging applications, which require long arcs
- Full CNC/Robotic interface with Arc Voltage Height Control support is standard
- Adaptor plugs to match competitive system interface cables are available
- An optional remote starting system allows the torch to be located up to 150 ft. (45 m) away from the power supply
- Machined torch body with 1-3/8 in. (35 mm) metal handle, available with and without 32 pitch rack to fit industry standard torch holders
- Robust machined torch components provide for reliability, durability, and ease of maintenance
- Metal nozzle and shield stand up to the toughest cutting conditions
- Wear parts are available individually, in sets, and in value packs, which eases ordering and saves money
- One-year warranty on torch

Ordering Information

ESP-150

This multifaceted, all encompassed, heavy-duty, water-cooled plasma cutting and gouging system is ideal for manual and mechanized applications.

- **Greater productivity - high speed cutting of most metals from gauge thickness to 2 in. (51 mm) thick plate**
- **Versatility - 230/460/575V and 220/380/415V, 3ph inputs**
- **Greater variation - adjustable output from 25-150A**
- **Built-in water cooler - simplifies maintenance, less hookup, no wiring issues, no extra hoses; water flow is controlled with power supply**
- **Leather sheath wrapped torch - protects torch leads from abrasion and molten metal**
- **Cuts with air, Nitrogen, Argon/Hydrogen mixtures or Nitrogen/Hydrogen mixtures**
- **Built-in CNC interface provides easy connection of automation applications**
- **Torch design provides perfect electrode centering; provides longer tip life by minimizing the possibility of double-arcng**
- **Torch spare parts kit supplied with each outfit; ample supply of spare parts at no additional cost to minimize downtime**
- **Thermal overload switches - prevents damage if unit overheats due to insufficient air flow**
- **Line voltage compensation**
- **Automatic intermittent cutting - additional capability, permits continuous cutting of grates, expanded metal, heavy screen material, etc.**
- **Wheels and cylinder rack provides better portability and system utilization, standard on all manual packages and on mechanized packages with cylinder regulators**
- **Ideal for plasma gouging**
- **One-year warranty on torch**

The multi-gas packages include three R-6702 regulators that can be used with any non-corrosive gas.

The cylinder regulator packages include one N₂ Oxfeld Elite Series Cylinder Regulator R-770-75-580, #0558010681, and two H-35 Oxfeld Elite Series Cylinder Regulator R-770-75-350, #0558010679, and three 25 ft. (7.6 m) hoses.

The air regulator packages include an air regulator/filter panel.

Ordering Information

230/460/575V, 3ph, 60Hz. Includes: console, PT-26 torch with leather sheath, torch spare parts kit, 25 ft. (7.6 m) or 50 ft. (15.2 m) work cable, TR-21 truck with dual cylinder rack, regulators, gas hoses, and torch coolant.

Deuce Pack 150

- With 300A of plasma cutting and gouging power, this heavy-duty system is the ideal choice for foundries, mining, logging equipment repair, and other industrial applications
- Handles even the heaviest materials with the capacity to cut up to 4 in. (101.6 mm) manually
- Eliminates carbon arc fumes with excellent plasma gouging capacity - removes up to 77 lbs. (35 kg) of metal an hour
- For exceptional versatility, separates into two 150A consoles for smaller scale applications
- Adjustable output down to 30A facilitates cutting of thinner metals
- Built-in water cooler simplifies maintenance, less hookup, no wiring issues, no extra hoses, and water flow is controlled with power supply
- Leather sheath wrapped torch protects torch leads from abrasion and molten metal
- Cuts with air, Nitrogen, Argon/Hydrogen mixtures or Nitrogen/Hydrogen mixtures
- Built-in CNC interface provides easy connection of automation applications
- Torch design provides perfect electrode centering; provides longer tip life by minimizing the possibility of double-arcng
- Torch spare parts kit supplied with each outfit; ample supply of spare parts at no additional cost to minimize downtime
- Thermal overload switches - prevents damage if unit overheats due to insufficient air flow
- Line voltage compensation
- Automatic intermittent cutting - additional capability, permits continuous cutting of grates, expanded metal, heavy screen material, etc.
- One-year warranty on torch

ESP-150 & Deuce Pack 150

Customized ESP-150 and Deuce Pack mechanized and manual plasma systems are available. Multiple power supplies, torch types and lengths, gas regulation options, and hose and cable lengths are offered, which allows the system to be customized to meet the precise needs of a particular application. The large number of options also allows these systems to be extremely versatile.

Contact your ESAB Sales representative or ESAB's Plasma Product Management team to have a have a custom system configured to your exact specifications.

Refer to the options and accessories shown below when ordering or calling for a quote. Choice of power supply and torch will effect the package options available.

m³ Precision Plasma System

- ESAB's m³ Plasma system takes plasma productivity to new heights - now multiple plasma cutting and marking features are available in a single easy-to-use system
- Perform high speed plasma cutting, high precision cutting, plasma marking, thick-plate cutting, dry (multi-gas) cutting, and water injection cutting all with a single plasma system
- This remarkable system can quickly and accurately cut and mark a wide variety of materials - it can cut as thin as 20 ga. (2 mm), or as thick as 6 in. (150 mm), depending on which plasma power source is installed
- The m³ Plasma system features the most advanced gas control system in the industry, fully automated by ESAB's Vision CNC
- Great flexibility in selection and mix of shield gases allows an operator to produce the best cut quality on any material
- Simply select the material type and thickness, and the Vision CNC automatically sets the start, cut, and shield gas pressures and flow rates
- Process parameters for most plasma cutting and marking applications are pre-loaded in the Vision CNC, and custom parameter files can be easily created as needed
- Precision cutting in the ISO 9013 quality range 3
- Typically 2° or less cut edge angle (Precision Mode)
- Sharp top & bottom edge with virtually no dross
- Cutting over dry table or under water
- Straight or bevel cutting up to +/- 45°
- Longer consumable life and lower consumable cost
- Fewer parts to purchase and stock
- Highly efficient, high power factor designs
- Modular system grows with your needs

PT-17A/PT-17AM Manual Torch

- Excellent cutting capability - cuts up to 1-1/4 in. (31.75 mm); severs up to 1-1/2 in. (38.1 mm); pierces up to 1/2 in. (12.7 mm)
- Produces clean, high quality cuts
- Patented safety circuit for enhanced operator safety
- Operate with shop or cylinder air
- Compact, lightweight design for easy handling
- Long life electrodes lower operating costs
- Pilot arc starting - even starts on paint
- Gouging nozzles available
- Intermittent cutting capability for grate or expanded metal applications
- Standard and drag shield guards available for operator convenience

Plasma Equipment

Consoles

The PT-17A / PT-17AM can be used with the following older ESAB consoles:

- PCM-875 (w/adaptor P/N 19500)
- PCM-1125 (w/adaptor P/N 19500)
- PCM-100
- PCM-150

These versatile, easy to use 100 Amp torches provide superior performance for a full range of manual and mechanized cutting applications.

PT-121/PT-121M Manual Torch

- Excellent performance - cuts up to 2 in. (50.8 mm); pierces up to 1/2 in. (12.7 mm)
- Automatic pilot arc starting
- Uses Nitrogen or H-35 for plasma gas; uses air, Nitrogen, Oxygen, Carbon Dioxide or Argon for cooling gas
- Choice of 75°, 90° or mechanical torches
- Extended front end available
- Gouging nozzles and heat shield available

Plasma Equipment

Console

The PT-121 can be used with the following older ESAB console:

- PCM-150

This highly versatile torch operates with a variety of gases and offers superior cutting and gouging capability.

Plasma
Equipment

PT-27 Manual Torch

- Most compact 80A torch on the market
- Excellent cutting capacity - cuts up to 1 in. (25.4 mm); severs up to 1-1/4 in. (31.75 mm)
- Uses shop air, cylinder air or Nitrogen for superior versatility
- Pilot arc starting - even starts through paint
- Choice of 25 ft. (7.6 m) or 50 ft. (15.2 m) lead length
- Perfect electrode centering
- Intermittent cutting capability for grate or expanded metal applications
- Use with three cutting nozzle sizes for exceptional versatility
- Improved spring-loaded seat eliminates head burn-out

Plasma Equipment

Consoles

The PT-27 can be used with the following older ESAB consoles:

- PCM-80i
- PCM-750i
- PCM-875i
- PCM-1000i
- PCM-1125i

50 ft. (15.2 m) lead with ring terminal	21662
25 ft. (7.6 m) "CE" ¹	35548

¹For use in regions that require "CE" such as Europe, Russia, and Australia.

Cable Leads

25 ft. (7.6 m)	0558005677
50 ft. (15.2 m)	0558006547

Note: All torch assemblies and replacement heads are supplied with the seat installed.

For units manufactured prior to 4/31/1995 (that have 2 twist lock plugs for torch hook-up) order #21620 or #21621.

PT-27, 75°

25 ft. (7.6 m) lead with plug	21620
50 ft. (15.2 m) lead with plug	21621

Designed for superior cutting performance and ease of handling, the PT-27 produces clean, exceptionally high quality cuts.

Improved Seat Design

PT-27 spring-loaded seat dramatically improves the torch head life by making the PT-27 resistant to damage due to improperly tightened consumables. This seat will not correct a torch head that is already burnt out, but it will prevent torch head burnout on functioning torches.

If your PT-27 torch still has the old style valve pin, you will need to retrofit the torch to the improved seat design.

PT-38 Manual Torch

- Ergonomic handle for operator comfort
- Big face switch maximizes convenience when wearing welder's gloves
- New blowback technology
- Easily repairable in the field
- Minimum part configurations
- Molded strain relief for secure torch leads

Plasma
Equipment

Consoles

The PT-38 can be used with the following ESAB consoles:

- PowerCut 900
- PowerCut 1300
- PowerCut 1600

Designed for superior cutting performance and ease of handling, the PT-38 torch produces clean, high quality cuts.

PT-15XL Mechanized Torch

- Heavy-duty performance, cuts up to 6 in. (152.4 mm)
- Designed for exceptional durability
- Precision engineering
- Excellent nozzle and electrode concentricity
- 180° in-line mechanized torch
- Water cooled/water injected
- Pilot arc starting - even starts on paint
- Uses Nitrogen, Oxygen, or H-35 for plasma gas

PT-19XLS Mechanized Torch

- Heavy-duty performance
- Designed for exceptional durability
- Precision engineering
- Excellent nozzle and electrode concentricity
- 180° in-line mechanized torch
- Water-cooled, not water injected (dry)
- Pilot arc starting - even starts on paint
- Uses Oxygen, Nitrogen, Argon-Hydrogen or air for plasma gas

Plasma Equipment

Consoles

The PT-19XLS can be used with the following

ESAB consoles:

- ESP-150
- ESP-200
- Deuce Pack 150 (special order)

This ruggedly designed torch provides excellent performance for everyday use with ESAB consoles or as part of a specially configured ESP heavy mechanized cutting system.

PT-20AMX/21AMX Mechanized Torch

- 180° in-line mechanical torch
- Excellent cutting capability
- Extremely versatile - excellent for thinner materials
- Equipped with patented safety interlock feature
- Pilot arc starting - even starts on paint
- Available with 50 ft. (15.2 m), 25 ft. (7.6 m), 4 ft. (1.2 m) and 17 ft. (5.2 m) torch leads¹
- Compatible with a variety of ESAB consoles
- Drops easily into standard 1 in. (34.9 mm) torch holders

¹4 ft. (1.2 m) and 17 ft. (5.2 m) torch leads used on Remote Arc Starter only.

Consoles

The PT-20AMX/PT-21AMX can be used with the following older ESAB consoles:

- PCM-875
- PCM-1125 (with adaptor 19500)
- PowerCut 1250
- PowerCut 1500
- ESP-100 (no adaptor)

PT-36/PT-36R Mechanized Torch

- Choose your combination of gases, speed, and cut quality
- Precision close tolerance concentricity for optimum straight or bevel cutting, with highest cut quality and consumable life
- Low current precision cutting, conventional plasma cutting, 600A thick plate cutting, and water injection cutting, with the same torch
- Posi-thread design makes it easier to install consumables, and eliminates the worry of damaged threads on electrode, electrode holder, and torch body
- Cut and mark with the same set of consumables
- Fewer consumable parts cover the entire cutting range
- Cuts carbon steel up to 3 in. thick with 450A Oxygen
- Cuts stainless steel or aluminum up to 6 in. thick with 600A Argon-Hydrogen
- Current capacity of 720A at 100% duty cycle
- Speedloader aids in consumable changes without the worries and leaks caused by O-rings, or the expense of spare torch bodies

Plasma
Equipment

The rugged, reliable, PT-36 torch combines up to four single-purpose torches (heavy plate cutting, precision cutting, marking, and water injection). The end result - superior cutting flexibility and productivity over a wide range of materials and thicknesses, with minimal set up time, downtime, and consumable cost. No other system offers the reliability, economy, and productivity of the m³ Plasma System.

PT-37 Mechanized Torch

- 100% duty cycle for enhanced productivity allowing for continuous operation even at maximum thickness
- Utilizes a “drawn arc” to initiate the cut, which eliminates high frequency interference from the starting circuits
- An optional remote starting system allows the torch to be located up to 150 ft. (45 m) away from the power supply
- Machined torch body with 1-3/8 in. (35 mm) metal handle, available with and without 32-pitch rack to fit industry standard torch holders
- Robust machined torch components provide for reliability, durability, and ease of maintenance
- Metal nozzle and shield stand up to the toughest cutting conditions
- Wear parts are available individually, in sets, and in value packs, which eases ordering and saves money

Plasma
Equipment

Consoles

The PT-37 can be used with the following ESAB consoles:

- PowerCut 900
- PowerCut 1300
- PowerCut 1600
- ESP-101

The patented PT-37 torch cuts up to 1-1/4 in. (32 mm) material using air as the plasma and shielding gas. Utilizing a blowback start, and an electronically controlled pilot arc, the PT-37 sets a new standard for starting reliability, cutting characteristics, and consumable life.

PT-600 Mechanized Torch

- Precision engineering for heavy-duty performance
- Excellent nozzle and electrode concentricity
- 180° in-line mechanized torch
- Pilot arc starting - even starts on paint
- Uses Oxygen, Nitrogen, Argon-Hydrogen or air for plasma gas, Nitrogen, Argon-Hydrogen or air for start gas, and Nitrogen or air for secondary shield gas

Gas
Apparatus

Gas Apparatus

Safety. Durability. Performance. Guaranteed.

An American Tradition

ESAB's OXWELD®, PUROX® Elite Series, and PREST-O-LITE® gas apparatus is engineered, assembled, and tested in Florence, SC, USA - and has been for more than 45 years.

ESAB's Lifetime Warranty

ESAB's gas apparatus Lifetime Warranty applies to OXWELD, PUROX Elite Series, and PREST-O-LITE standard torches, regulators, and flowmeters. The warranty covers manufacturer defects in materials and workmanship.

To make a warranty claim, please call 1.800.ESAB.123, or visit esabna.com/lifetimewarranty.

Gas
Apparatus

ENGINEERED

ASSEMBLED

TESTED

Number One in Quality

The OXWELD, PUROX Elite Series, and PREST-O-LITE welding and cutting product lines have achieved world-class quality through Total Quality Control, which includes the commitment of every member of our team.

Our employees - from the CEO to the men and women on the production line - are provided with the knowledge and skills they need to act as guardians of quality. We've put systems in place to recognize and correct mistakes before a product reaches your hands. And our quality control efforts cover every step, from product development to production to customer service.

Gas Apparatus

Processes

In oxyfuel gas welding, heating, and cutting, an intense flame is produced by burning a controlled mixture of oxygen and a fuel gas. The gases are drawn from separate sources through pressure regulators and introduced into a torch for mixing. The gases then exit the welding head or cutting tip, where they are ignited. Flame intensity depends on the flow rates of the gases, the gas mixture ratio, the properties of the fuel gas selected, and the type of welding head or cutting tip. Flow rates and mixture ratios are controlled by the regulator pressure settings and by the torch valves.

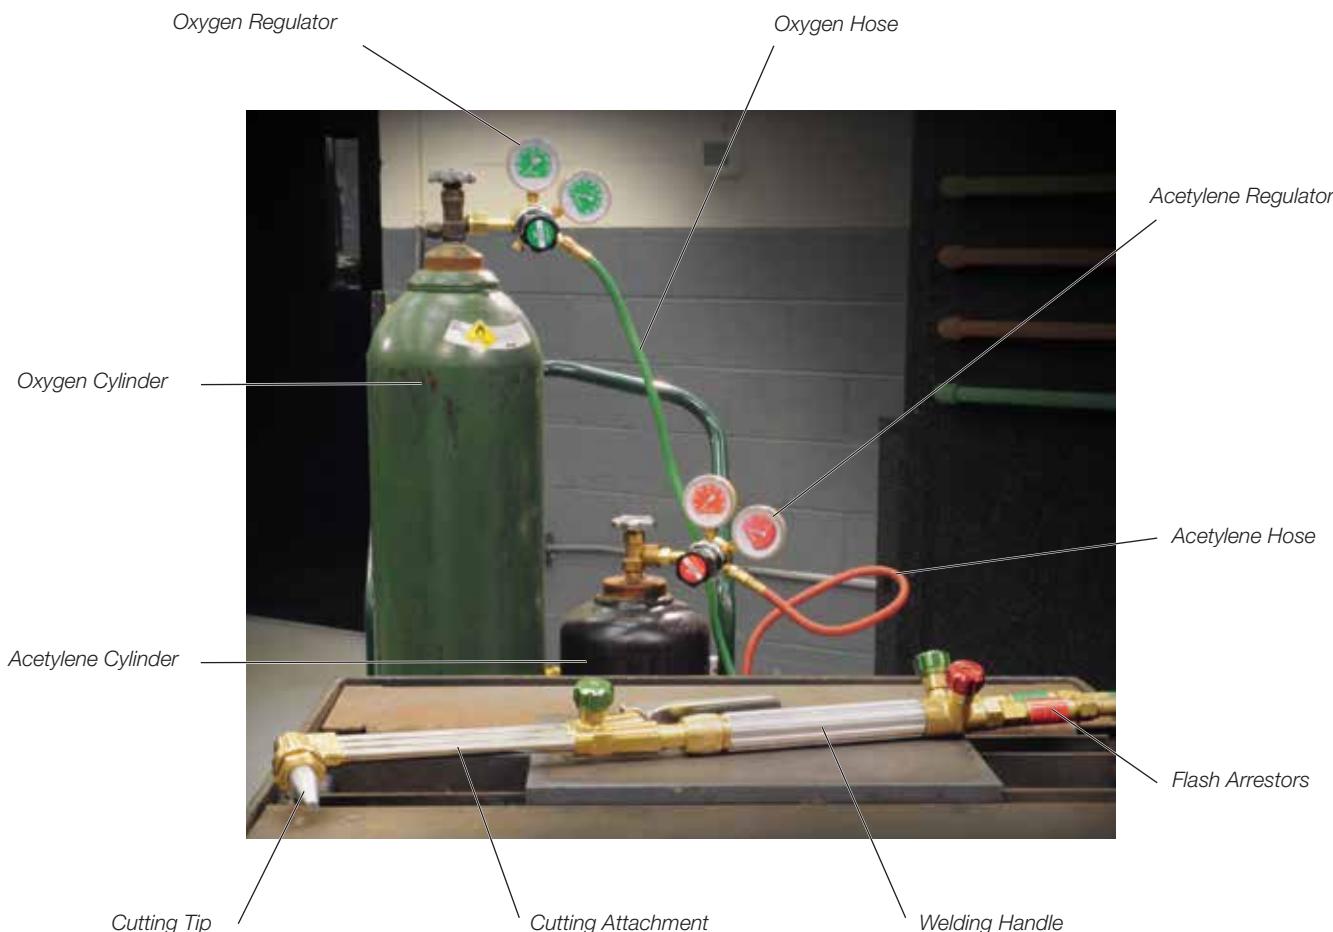

Welds are formed from the weld puddle created through contact of flame, workpiece, and welding rod, if used. Use of flux removes oxide and scale from the welding area and helps assure a sound weld. In cutting operations, a concentrated flame is used to preheat and maintain the workpiece at its ignition temperature while a high-velocity stream of oxygen is directed at the preheated plate. The oxygen stream rapidly oxidizes the metal in a narrow path and blows away the slag to form the kerf.

Basic equipment necessary for oxyfuel gas welding and cutting includes a torch with welding heads, cutting attachment, and cutting tips; oxygen and fuel gas hoses; oxygen regulator; and acetylene or other fuel gas regulator. Always comply with the instructions listed in the operator's manual provided with each piece of equipment.

The Oxy-Acetylene Handbook

For nearly five decades, the most comprehensive and widely used reference and textbook on oxy-acetylene welding, cutting, hard-facing, surfacing, and heating applications.

Combination Torches

Elite Swirl Injector¹

Performance Benefits

- In the higher pressure oxygen stream, the injector swirls the oxygen to create a superior homogenous mix of gas in the entrainment zone that increases efficiency
- The superior homogenous mix in the entrainment zone delivers optimum performance not possible with equal pressure mixers and tip mixers
- Swirling of the high-pressure oxygen mixing with the fuel gas creates a pumping action that pulls a vacuum on the torch to improve performance with long hoses and low-pressure operations

¹This feature is available on the new CA-4200 cutting attachment, SCT-1500, and SCT-4200 straight cutting torches.

Separate Flash Arrestors

- When flash arrestors are in proper working condition, used per instructions, and checked regularly for clogging, they are excellent safety devices to help prevent injury and flashback
- However, when used incorrectly, flash arrestors can actually cause flashback
- ESAB offers separate flash arrestors that are not built into the torch
- The flash arrestor can be safely checked without causing torch downtime

Torch mounted

Regulator mounted

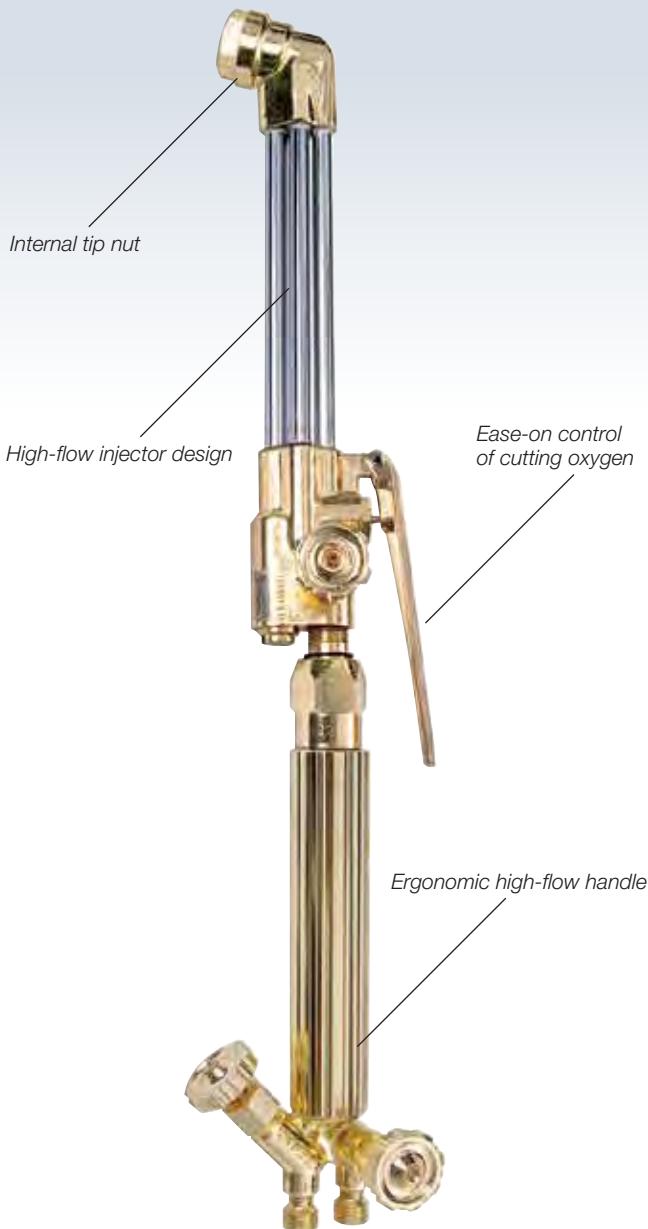

OXWELD® W-17/CW-23

Combination Torch

Extra Heavy-Duty

- W-17 welding handle
- CW-23 cutting attachment
- Use with any fuel gas
- Cuts 8 in. (203 mm) acetylene
- Cuts 4 in. (102 mm) alternate fuels
- Heats 368,000 btu/hr. using 250 cfh acetylene
- Welds 1 in. (25 mm) using 100 cfh acetylene
- Industry's preferred welding torch
- Universal injector
- Operates on low or medium pressure fuel gas
- Ease-on control of cutting oxygen

Propylene 2371
MAPP 2406
Propane 2563
Natural Gas 900-1000

Gas Apparatus

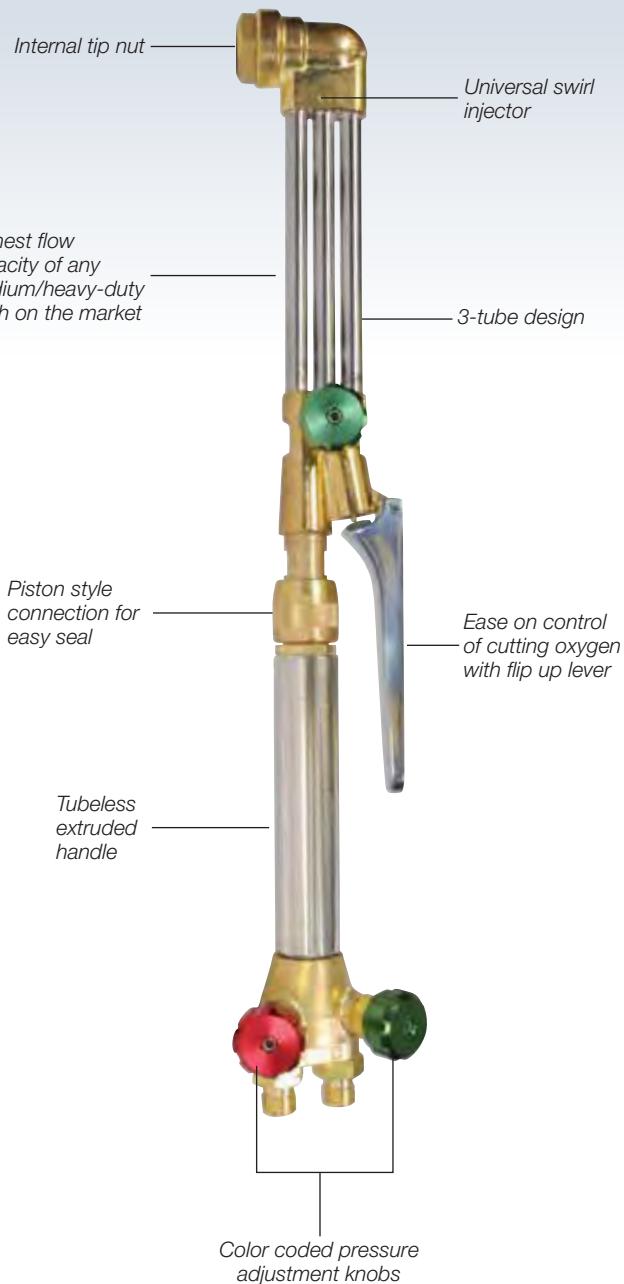

PUROX® Elite Series WH-4200/CA-4200

Combination Torch

Medium/Heavy-Duty

- WH-4200 welding handle
- CA-4200 cutting attachment
- Cuts 8 in. (203 mm) acetylene and alternate fuels
- Heats 294,000 btu/hr. using 200 cfh acetylene
- Welds 1 in. (25 mm) using 70 cfh acetylene
- **Most capacity of any medium-duty combo torch on the market**
- Properly weighted for reduced fatigue
- Backwards compatible with W-300/CW-300, and W-400
- Patented Universal Head Swirl Injector gas mixing design
- Superior mix of preheat gases
- Improved performance when using long and/or small diameter hoses and low inlet pressure fuel gases due to the vacuum entrainment zone
- Helps resist flashbacks due to this low pressure vacuum effect
- 3-tube, in-line design for increased flow, performance, and durability
- Universal gas design for superior flexibility:
 - Can use any fuel gas including acetylene
 - Just change tip to switch between positive pressure (acet) to injector style (alt fuel) - no need for separate torches
- Ease-on control of cutting oxygen stream reduces spatter when piercing and increases operator confidence
- Color-coded preheat valve knobs for easy adjustments, even with eye shade on
- Internal cutting tip nut design for best tip-to-head seat possible

OXWELD® SCT-1500 & PUROX® SCT-4200

Elite Series "BF" Straight Cutting Torches

- Can use any fuel gas including acetylene
- Up to 50% more capacity than competitive torches
 - Cuts up to 10 in. (254 mm) with acetylene
 - Cuts up to 12 in. (305 mm) with alternate fuels
- Bottom front cutting oxygen lever/trigger mount position
- Available in multiple versions:
 - OXWELD SCT-1500 Trigger
 - PUROX SCT-4200 Trigger or Lever
- Patented Universal Head Swirl Injector gas mixing design
- Superior mix of preheat gases
- Improved performance when using long and/or small diameter hoses and low inlet pressure fuel gases due to the vacuum entrainment zone
- Helps resist flashbacks due to this low pressure vacuum effect
- 3-tube, in-line design for increased flow, performance, and durability
- Universal gas design for superior flexibility:
 - Just change tip to switch between positive pressure (acet) to injector style (alt fuel) - no need for separate torches

Machine Cutting Torches

OXWELD® C-67 Machine Cutting Torch

C-67 Injector Legend

Type I

- Less than 5 psi of alternate fuel inlet pressure
- Up to 8 in. (203 mm) cutting capacity
- Excellent multi-torch balancing
- Limited preheat intensity
- L.L.P.M.C. (low, low pressure - medium capacity)

Part Number 01Y61 (20-1/2 in. torch).

Type II

- 3 psi or more of alternate fuel inlet pressure
- Up to 20 in. (508 mm) cutting capacity
- Not recommended for multi-torch balancing
- Great for heavy preheat applications (beveling, aux. preheat, etc.)
- L.P.H.C. (low pressure - high capacity)

Part Number 01Y57 (20-1/2 in. torch).

Part Number 01Y75 (12-3/4 in. torch).

Type III

- 5 psi or more of alternate fuel inlet pressure
- Up to 14 in. (356 mm) cutting capacity
- Best all-around choice for multi-torch operation
- Heavy preheat for quick pierce starts
- L.P.M.C. (low pressure - medium capacity)

Part Number 01Y56 (20-1/2 in. torch).

Part Number 01Y74 (12-3/4 in. torch).

Barrel diameter, in. (mm)	1-1/4 (32)

C-69

Ordering Information

C-69 without rack 28X47
C-70 without rack 28X53

CM-79 Portable Cutting Machine

- Solid state controls for dependable, maintenance-free service
- Three position switch for start, stop, and reverse
- Clutch levers at both ends of carriage for greater accessibility
- Direct reading speed control dial - can be preset or instantly adjusted during operation
- Normal speed range 0-60 ipm (0-1.5 m/min)
- Easily adjustable to 90 ipm (2.3 m/min)
- Sturdy one-piece aluminum housing
- Heavy-duty motor with built-in solid state governor for dependable, accurate speed

CM-79 with C-58 torch, rigging assembly, and track

Ordering Information

Machine or Rigging Only

CM-79 portable machine carriage, 28 ft. (8.5 m) lead . 995557
Torch rigging assembly 16V90

Basic machine package 998695

Includes: standard machine, rigging, and manifold kit.

Complete Machine Package

*Includes: everything supplied with Basic Package plus
C-58 torch #02X74.*

Heat shield and heavy-duty track section .. 998947

Options & Accessories

Heavy-Duty Track Section

6 ft. (2 m)	16V82
7-1/2 ft. (2.3 m).....	20086
9 ft. (2.7 m)	2223156

Circle cutting attachment, 2-54 in. (41-1372 mm) diameter	16V84
Double heat shield kit	995586
Counterweight ¹	995587
Manifold kit	639659
High temperature kit ²	997608

¹For balancing heavy, off-center equipment loads.

²Recommended when carriage must travel on hot plates;
temperature of control unit should not exceed 70°C (158°F).
Contact your ESAB supplier for additional information.

Specifications

Overall Size			Weight	Carrying Load Maximum	Speed Range	Cutting Capacity	Circle Cutting Range	Power Requirements
Length	Height	Width						
in. (mm)	in. (mm)	in. (mm)	lbs. (kg)	lbs. (kg)	ipm (m/min)	in. (mm)	in. (mm)	
15-1/4 (387)	7 -(178) (including mounting stud)	7 1/4 (184)	21 (9.5) (without rigging or torch)	250 (113)	0-60' (0-1.5)	0-4 (102) thick ³	2-54 ³ (51-1371)	120 vac, 2 amp (maximum), 50/60 Hz, 1 ph

¹Can be adjusted to attain speeds up to 90 ipm (2.3 m/min).

²Up to 10 in. (254 mm) with accessory heat shield.

³Can be increased by use of longer rod easily made from standard bar stock.

Pressure Drops in Hose

To operate oxy-acetylene welding and cutting torches with maximum efficiency, certain inlet pressures must be maintained at the torch. Pressure at the torch may be determined by placing a gauge adaptor assembly between the hose connections on the torch and on the hose. When no adaptor is available, the regulators should be set to values somewhat above those recommended for the torch in order to compensate for the pressure drop in the hose.

Pressure drop data for the most commonly used sizes and lengths of oxygen and acetylene hoses appears in the following tables. By adding the pressure drop for the specific piece of hose to the desired torch pressure, the pressure actually required at the regulator can be determined. Values falling between those shown in the tables can be easily determined by interpolation.

Pressure Drop in Oxygen Hose

Delivery Pressure lbs./in. ²	Oxygen Flow cfh	3/16 in. Hose Length				*1/4 in. Hose Length				*5/16 in. Hose Length				*3/8 in. Hose Length

Gas
Apparatus

*The values listed in table are average for new hose including standard fittings as listed. **Indicates pressure drop of less than 0.3 lb. per sq in.

Hose Nipples	3/16 in. Hose	1/4 in. Hose	5/16 in. Hose	3/8 in. Hose
Hole Diameter	0.126	0.1405	0.1935	0.250

Variations of plus or minus 10% may be expected, depending largely upon condition of the hose and fittings. To obtain inlet pressure, add the delivery pressure to the pressure drop given in the table.

Flash Arrestors, Check Valves & Supplies

Hose Line Flash Arrestors

- Will actually stop a flashback when properly operated when attached to OXWELD® or PUROX® Elite Series torch handles with "B" size inlets
- Also designed to stop reverse flow of gases; should be left in place when hose is detached

Flow rate maximum

For cutting = up to 12 in. (305 mm) tip.
For heating or welding = up to a #100 head.

Torch mounted

Regulator mounted

Ordering Information - Flash Arrestors

Torch Mounted

Matched pair	20357
Oxygen	20373
Acetylene	20374

Regulator Mounted

Matched pair	0558002695
Oxygen	0558002693
Fuel gas	0558002694

Reverse Flow Check Valves

- Attached either to a torch or a regulator, they provide a certain measure of protection against reverse flow of gases
- Any condition that might cause reverse flow will close the valve completely
- Reverse flow check valves should be tested periodically for reverse flow leakage - frequency of testing depends on severity of service

CAUTION:

Check valves ARE NOT designed to stop a flashback.

Flow rate maximum

100 cfh using check valves.

Check Valves

Ordering Information - Check Valves

For attachment to "B" size torch inlets

Oxygen	639110
Fuel gas	639109

For replacement of 1/4 in. (6.4 mm) NPT to "B" size regulator outlet connection

Oxygen	639112
Fuel gas	639111

For attachment to "B" size regulator outlets

Oxygen	639209
Fuel gas	639210

For attachment to "A" size inlet

Oxygen	6271725
Fuel gas	6271726

ORS Inlet

Oxygen	639212
Fuel gas	639211

ORS = OXWELD Railway Service

Flash Arrestors, Check Valves & Supplies

Fitted Hose Assemblies

All hoses meet or exceed the standards for welding and cutting hoses established jointly by the Compressed Gas Association and the Rubber Manufacturers Association. They conform to Specification of the Association of American Railroads and to the requirements of the National Fire Protection Association.

Single Line Hose

■ Type S

Consists of one braid or ply of reinforcement; normal welding and cutting service.

Twin Hose

■ Type VD

Consists of two hoses with single braid or ply reinforcement identical in construction - one for oxygen, one for acetylene - connected continuously along the sides. Oxygen is green, acetylene is red. Both covers are smooth.

Maximum Working Pressure

Type S (one braid or ply).....200 psig
Type VD (two braid or ply).....200 psig

Grades of Single & Twin Hose

■ Grade RM

Has neoprene cover which is flame- and oil-resistant and a non-oil-resistant inner rubber tube. For use with oxygen and acetylene only.

■ Grade R

Has a non-oil-resistant rubber inner tube and cover. For use with acetylene only.

■ Grade T

For use with oxygen and all gases.

Fitted Assemblies

Fittings used with single and twin hose assemblies are standard hose connection nuts, nipples, and crimped ferrules.

Single Fitted Hose Assemblies (Type S, Grade R) Acetylene Only

Description	Length	Connection Sizes	Part Number (Acetylene Only)
	ft. (m)		
3/16 in. (4.8 mm) Fitted Hose Assemblies	6 (1.8)	A-A	501F11
	12.5 (3.8)	A-A	501F12
	25 (7.6)	A-A	501F13

Twin Fitted Hose Assembly (Grade T) Oxygen & All Gases

Description	Length	Connection Sizes	Part Number (Acetylene Only)
	ft. (m)		
3/16 in. (4.8 mm) Twin Fitted Hose Assemblies	12.5 (3.8)	A-A	591F72
1/4 in. (6.4 mm) Twin Fitted Hose Assemblies	25 (7.6)	B-B	593F83

Twin Fitted Hose Assembly (Type VD, Grade RM) Oxygen & Acetylene

Accessories

Adjustable Bevel Cutting Adaptor

For use with machine cutting torches using 1500 Series tips. The adaptor connects to the torch in the same simple manner as a cutting tip. It has an angular adjustment range from 0°-90° on either side of the vertical center line of the torch and locks at the desired angle of bevel by means of a socket head screw. Tip aligns with same center line as torch at any angle.

Auxiliary Preheat Kits for Bevel Cutting

For use with adjustable bevel cutting adaptor. The kit contains the necessary parts for attaching a preheat head (included in the kit) to the adaptor. The head leads the cutting tip and furnishes additional preheat for the cutting operation. The bend in the head may be readily modified, as desired. Auxiliary preheat kits are available for use with both acetylene and natural gas.

Ordering Information

Adjustable bevel cutting adaptor 18845

Auxiliary Preheat Kit (for above)

Acetylene 61Y99
Natural gas 63Y13

Test Gauge Adaptor

- Easy-to-read 2-1/2 in. (63.5 mm) gauge faces
- Identifies pressure/flow problems
- Easy to install and remove
- Permanent or temporary mounting
- Used to measure gas pressures at torch inlet connections

Ordering Information

Test Gauge Adaptors

For oxygen, 0-100 psig, "B" 07X17
For oxygen, 0-200 psig, "C" 21X48
For acetylene, 0-15 psig, "B" 262510
For alternate fuels, 0-100 psig, "B" 639422

Welding & Heating Head Extensions for WH-4200/W-17

Permit working at a comfortable distance from heat during heavy welding and heating jobs.

Slitting Adaptor

This adaptor fits directly on all cutting torches using 1500 Series tips. It has a scissors-type arrangement which gives an adjustment range from 1-1/2 to 12 in. (33 to 305mm) between the center line of the two tips. It is used in operations requiring parallel cuts as in coupon or slot cutting.

Ordering Information

Slitting adaptor - scissors type 22X42

Head Size	Length of Extension		Part Number
	in.	mm	
55/70	12	305	19X42
100	15	381	19X43
200	18	457	998790 ¹
250/300	21	533	19X45 ²
500	21	533	998825

¹Requires coupling #998838.

²Requires coupling #998839.

Rosebud Heating Nozzle

- For cutting torches with 1500 series tips
- Quickly converts from cutting to heating

Ordering Information

Rosebud Heating Nozzles

Number 55 acetylene	20238
Number 70 alternate fuels	20234

Torch Cutting Guide/Circle Cutting Attachment

A truly universal torch cutting guide for use with OXWELD, and PUROX Elite Series hand cutting torches and cutting attachments. The guide is supplied with inserts to accept either OXWELD or PUROX tips, and it will accept both series of Victor® tips.

To use the guide as a circle cutting attachment, just remove the guide handle and insert the guide rod and center point (which is supplied as part of the kit). Users can cut circles 5-25 in. (127-635 mm) in diameter.

Two-Way Oxygen Inlet Adaptor

- Permits use of one hose for both preheat and cutting oxygen on torches, which otherwise require two hoses

Ordering Information

Two-way oxygen inlet adaptor	18X20
------------------------------------	-------

Quick-Closing Oxygen Shutoff Valve

Particularly recommended when using Number 200 O-FG or above O-FG Rosebud Heating Heads. Connects between torch and oxygen hose for quickly shutting off oxygen flow in the event of flashback.

Ordering Information

Quick-closing oxygen shutoff valve	999306
--	--------

Torch Roller Cutting Guide Kit

A truly universal torch cutting guide for use with OXWELD, and PUROX Elite Series hand cutting torches and cutting attachments. The guide is supplied with inserts to accept either OXWELD or PUROX tips, and it will accept both series of Victor tips.

Ordering Information

Torch roller cutting guide kit	0558004121

Accessories

Leak Test Solution

Recommended when testing regulators or torches for leaks.

Ordering Information

8 ounces 998771

OXWELD Soapstone Markers

Indexable Model

A flat soapstone marker in stainless steel indexable holder. Stone can be advanced to new position with one hand. Oversized, sturdy pocket clip.

Gripper Model

Pencil-sized, anodized holder with built-in chuck to position and hold round soapstone element.

Ordering Information

Indexable model soapstone marker (2/pkg) 639133
Replacement flat soapstone element (144/pkg) 639141
Gripper model soapstone marker (72/pkg) 791F66

OXWELD Tip Cleaners

- For cleaning orifices of welding heads and cutting tips
- Stainless steel burnishers
- Sets are hinged in aluminum cases
- Choice of five sets - each includes cleaning file
- King size cleaner (4-1/8 in. long) can clean tip from back end
- Accessory brass bristle spline brush (#750F99) for cleaning internal slots in two-piece tips - stores in tip cleaner case
- Identification stamped on back of each case
- Special set for High Speed "HS" tips

Set	Number of Cleaners	Drill Size Range	Part Number
Standard	12	49-75	751F00
King size	12	49-75	754F00
Jumbo	9	30-48	752F00
Master ¹	21	30-75	753F00
"HS" ²	15	-	755F00

¹Includes all cleaners from both Standard and Jumbo sets.

²For cleaning orifices of 1563 HS and 1566 HS cutting tips.

Operating Data - Important Notes

1. Operating data is based on typical operating conditions. All values shown are average values. Factors such as the type and quality of the steel, its surface condition, the purity of the oxygen used in the cutting reaction, etc., will directly affect the results obtained.
2. All pressures given are measured at the torch. Pressure drop through hose must be considered when setting pressure at the regulator. Generally, 1/4 in. (6.4 mm) I.D. hoses up to 25 ft. (7.6 m) long are adequate for cutting steel up to 4 in. (102 mm). If longer hoses are required, and if cutting thicker steels, 3/8 in. (9.4 mm) I.D. hoses should be used.

3. The given data for acetylene tips is based on medium pressure torches. Unless otherwise stated, they will work with low pressure acetylene when higher oxygen pressure may be required, particularly when cutting steel plate 4 in. (102 mm) thick and up.
4. Kerf widths in the tables are average. When the kerf widths are of particular importance, a trial cut in scrap section is recommended.
5. Given pressures and flows are ranges. Please reference your specific torch literature for the most accurate tip pressures and flows.

Cutting Tips

OXWELD®, PUROX®, Victor® Style Cutting Tips

OXWELD
CUTTING TIPS

- Precise CNC controlled drilling process ensures consistency in performance and quality
- One-piece tips are mirror smooth with internal angles rounded for non-turbulent, more efficient gas flow - clean, smooth cuts with minimal kerf
- Preheat ports are closely spaced around cutting orifice for greater concentration of preheat flames
- Long, parallel preheat passages permit re-dressing tips without affecting performance
- One-piece tips are a single piece of solid copper - provide maximum cooling - recommended always for acetylene, and for other fuel gases when heat exposure is unusually severe
- Two-piece tips - recommended for high efficiency with alternate fuels - solid copper, heavy-wall external sleeve and brass internal sections can be ordered separately to minimize replacement cost

One-Piece Acetylene Cutting Tip

Four Steps to Proper Tip Selection

1. Choose One-Piece or Two-Piece Tip:

Acetylene - one-piece tip always.

Alternate Fuels - two-piece tip provides most efficient operation for normal cutting. One-piece tip extends life where heating is very severe.

2. Choose Series:

See "Cutting Tips Product Offering Guide".

3. Choose Preheat Capacity:

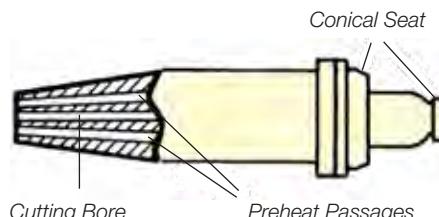

Choice of tip depends on preheat capacity. See description above tip pictures on following pages. Steel-coated with rust and scale, as well as bevel cutting, requires heavy preheat.

4. Choose Size:

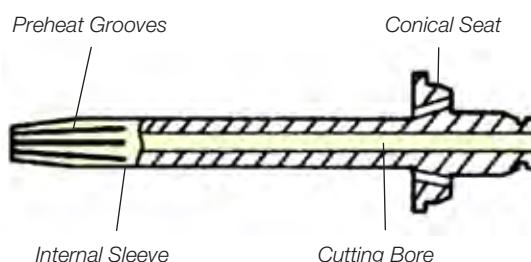

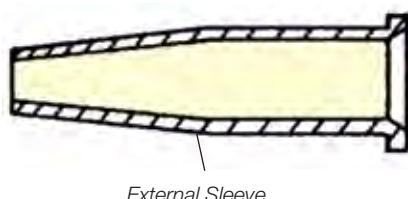

Select size recommended for thickness of steel to be cut. Oversize tips waste gas. Use oxygen pressure recommended for tip.

Victor® is a registered trademark of Thermadyne Holdings Corporation.

- Two-piece, high-speed, high preheat for machine cutting, alternate fuels

◊ To clean preheat slots, remove external sleeve and use a soft bristled brush.

Clean cutting orifice only with high speed tip cleaning kit #755F00.

Given pressures are torch inlet pressures, not what to set regulator at; hose length, diameter, flash arrestor use, and many other factors affect pressure. Use test gauge adaptors to check pressure at back of torch.

When using tips larger than 6 in. (152 mm), ESAB recommends using straight (hand) cutting torches, not combination torches.

19 ¹	483	65Z50	50-60	5-7
25	635	65Z56	50-60	5-7

¹Spudded for maximum useful oxygen flow at 80-90 psi.

²Spudded for maximum useful oxygen flow at 50-60 psi.

³The cutting oxygen throat diameter is 0.055 in. (1.4 mm) on #65Z55; 0.125 in. (3.2 mm) on #66Z50.

- Unsurpassed for washing off rivet heads and then piercing rivet to facilitate removal
- Each tip is equipped with a spud, which produces a low-velocity oxygen stream

Given pressures are torch inlet pressures, not what to set regulator at; hose length, diameter, flash arrestor use, and many other factors affect pressure. Use test gauge adaptors to check pressure at back of torch.

When using tips larger than 6 in. (152 mm), ESAB recommends using straight (hand) cutting torches, not combination torches.

- Heavy preheat for scrap cutting and beveling in excess of 45°
- See torch datapage for operating data

Given pressures are torch inlet pressures, not what to set regulator at; hose length, diameter, flash arrestor use, and many other factors affect pressure. Use test gauge adaptors to check pressure at back of torch.

When using tips larger than 6 in. (152 mm), ESAB recommends using straight (hand) cutting torches, not combination torches.

Cylinder Regulators

OXWELD® and PUROX® Elite Series

Why Choose ESAB?

Purox Elite Series R-720 shown

Cylinder Regulators

OXWELD® and PUROX® Elite Series

Regulators

ESAB manufactures a complete line of regulators that are unsurpassed in their field. They have the capacity to handle virtually all gas and electric welding, cutting, heating, and related process applications ranging from light-duty maintenance and repair operations through general- and heavy-duty production. All regulators meet UL listing requirements.

Cylinder-Based Explosions

When oxygen comes in contact with certain impurities, especially a hydrocarbon, spontaneous ignition can occur. When this happens in the inner chambers of an oxygen regulator, it causes a cylinder-based fire or explosion.

Explosions can occur when prescribed practices for the safe handling and use of cylinders and regulators are not followed. Regulator pieces can become burning projectiles and cause serious personal injuries.

Because any regulator can be used contrary to the manufacturer's warnings and instructions, it is impossible to guarantee that an explosion will not occur. After years of research and development, ESAB has achieved an advance in regulator design that makes a cylinder explosion more likely to be contained if a regulator is misused.

In extensive tests where we simulated operator misuse, ESAB regulators were more effective at minimizing the risk of personal injury than any of the competitive brand single- or two-stage models that were tested.

Further, the explosion protection that is built into our exclusive design has been patented and added to all ESAB cylinder oxygen regulators.

Single-Stage or Two-Stage Regulators

All regulators are used to reduce the gas pressure supplied by a high pressure source to a precise workable level that can be handled by the equipment being used. Both single- and two-stage regulators control only the gas pressure - not the flow rate, unless equipped with a flow control device.

Single-Stage Regulators

Reduce pressure in one step. Changes in input pressure will cause changes in output pressure. Since the cylinder pressure will decrease as the cylinder empties, it is necessary to make occasional readjustments for consistent output pressure. Where input pressure remains constant, such as from liquified gas sources or controlled line supplies, no adjustments are necessary.

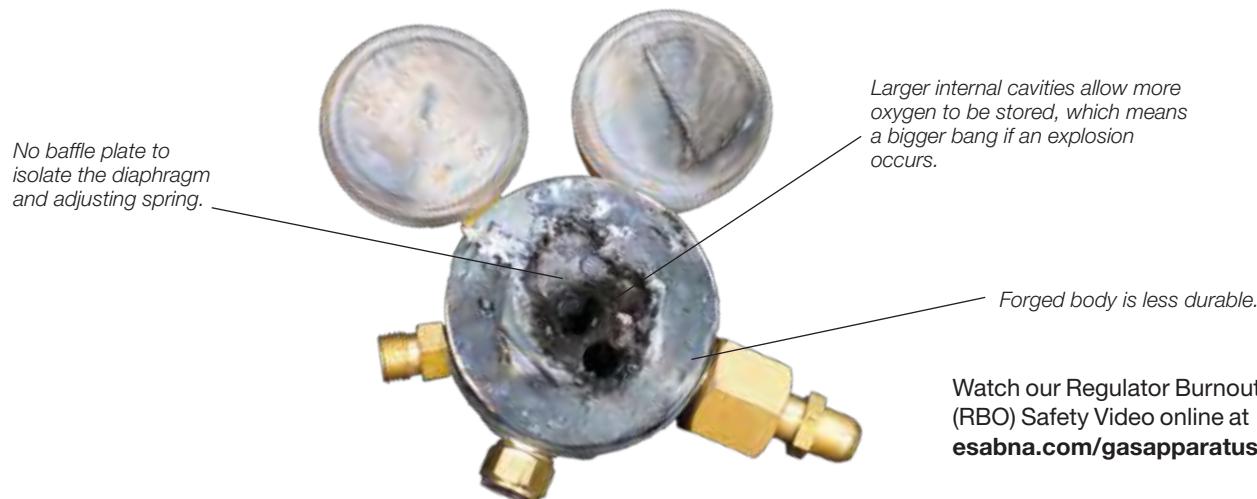

Two-Stage Regulators

Reduce pressure in two steps. They are actually two regulators in one. The first stage reduces the input pressure to a preset intermediate pressure, which becomes the input pressure to the second stage. Because the intermediate pressure is regulated, the delivery pressure of the regulator remains virtually constant. As a result, cylinders can be used to much lower pressures for increased gas savings for our customers - up to 10% of full cylinder content savings, depending on regulator service.

Gauge-less Regulators

In applications where the gauges are subject to frequent damage, gauge-less regulators are often preferred. A spring-loaded, pop-up indicator retracts when the cylinder is nearly empty. A sliding indicator in the regulator cap is used to indicate delivery pressure.

This regulator without explosion protection experienced a regulator burnout (RBO)

Cylinder CGAs

Flow data provides an aid to proper regulator selection. The regulators are rated with standard CGA fittings. Other factors to consider include hose diameter and length, valve, and gas apparatus combinations. If more detailed information is required for a specific application, consult your distributor for assistance.

To find the flow rate for a particular regulator and gas, refer to the appropriate curve and the correction factor, if any, noted below the curves. The following example will help in reading the curves:

In Figure 3, the helium flow rate for an R-770-500-580 regulator, given a delivery pressure of 240 psig and inlet pressure of 300 psig, is determined by multiplying the curve reading of 1,000 cfh by the correction factor of 2.7. The flow rate, therefore, is 2,700 cfh.

Gas Apparatus

Figure 1 — R-770-150-540, -350, -580, -590, -680

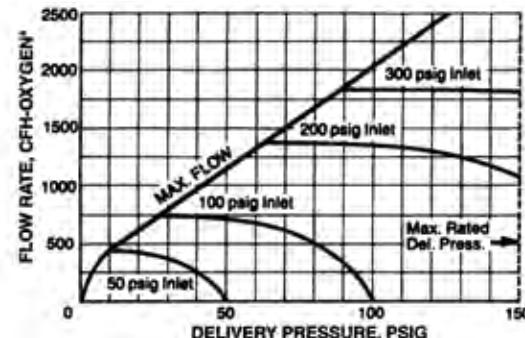

Figure 2 — R-770-200-540

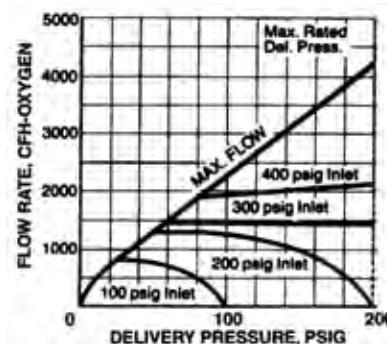

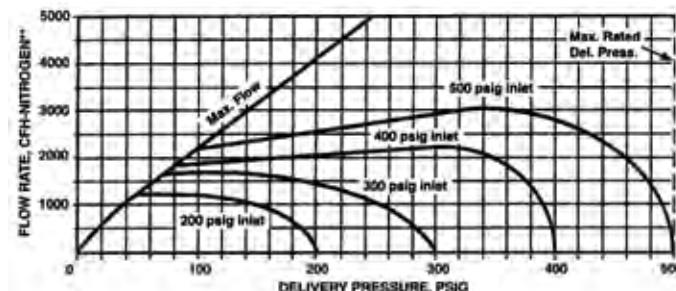

Figure 3 — R-770-500-580

^aFor other gases, multiply oxygen flow rate by: 0.9 for argon and FG-2; 1.1 for nitrogen; 1.4 for natural gas; 2.8 for helium; 4.0 for hydrogen.

^bFor other gases, multiply nitrogen flow rate by 0.8 for argon; 2.7 for helium.

Cylinder

Regulator/Flowmeter Combinations

R-760-CF-320 Carbon Dioxide

- Black anodized finned body for the best heat conduction possible
- Valve stem attached to diaphragm for positive shut off, especially when cold
- Low rate pressure adjusting spring for smooth and easy flow adjustment, coupled with a 2-1/2 in. (63.5 mm) delivery gauge scaled in cfh
- Carbon dioxide flow rates up to 80 cfh

R-720-CF-580

- 2-1/2 in. (63.5 mm) delivery gauge scaled in cfh
- Accurate argon flow rate of 10-40 cfh

R-720-FM-580

- Mounted with the well-known L-32 type flowmeter
- Accurate flow control of argon, helium, C-25, and nitrogen
- Delivery pressure to flowmeter factory-preset to 50 psig

R-5007-FM-580/R-5008-FM-320

- R-5007 for argon, helium, C-25 mixture, and nitrogen (R-5008 for carbon dioxide only)
- Accurate flow control of argon, helium, C-25, and nitrogen
- Delivery pressure to flowmeter factory-preset to 50 psig

R-502-FM-580

- Two-stage version of R-5007
- Provides constant, accurate flow as cylinder pressure decreases

Gas Apparatus

Cylinder

Regulator/Flowmeter Combinations

R-33 Regulator Flowmeter

- Durable Lexan outer tube and flow tube with easy-to-read graduations
- Solid brass piston and machined brass body
- 3,000 psi cylinder contents gauge

R-50 Series Regulator/Flowmeter Combinations

- Brass bar stock construction for long life and durability
- Equipped with cylinder contents gauge for convenience
- Equipped with reliable safety release system for operator and equipment protection

Station Drop/Line Regulators

R-760 OXWELD Elite Series Extra Heavy-Duty Station Regulators

- Similar in construction to single-stage, heavy-duty cylinder regulators, these regulators are equipped with a "C" size inlet connection
- Models are available for oxygen, acetylene, alternate fuels, and inert gases

Extra Heavy-Duty Hi-Flow R-760

R-720 PUROX Elite Series Medium/Heavy-Duty Station Regulators

- Similar in construction to single-stage, medium-duty cylinder regulators, these regulators are equipped with a "C" size inlet connection
- Models are available for oxygen, acetylene, alternate fuels, and inert gases

Medium/Heavy-Duty R-720

R-6700 OXWELD High-Capacity Station Regulators

- For multi-torch applications; for example, the supply of cutting oxygen to an eight-torch cutting machine working on heavy plate
- Three models are available with up to five times the capacity of standard models
- Equipped with 1/2 in. (13 mm) NPT female inlet/outlet connections, and a delivery pressure gauge capacity of standard models
- Can be used with any common, non-corrosive, industrial gas
- "C" size outlet fittings available for oxygen, fuel gases, and inert gas

High-Capacity R-6700

Station Drop/Line Regulators

¹Inlet pressure is limited because pressure of pipeline with "C" size hose-type outlets should not exceed 200 psig. Inlet pressure on acetylene regulators is limited because pressure of pipelines conveying acetylene should never exceed 15 psig.

²Outlet Connection:

CGA 022 (formerly "B" oxygen) - 9/16 in. - 18 RH male connection
 CGA 023 (formerly "B" fuel gas) - 9/16 in. - 18 LH male connection
 CGA 032 (formerly "B" inert gas) - 5/8 in. - 18 RH female connection

Inlet Connection:

CGA 024 (formerly "C" oxygen) - 7/8 in. - 14 RH female nut
 CGA 025 (formerly "C" fuel gas) - 7/8 in. - 14 LH female nut
 CGA 034 (formerly "C" inert gas) - 7/8 in. - 14 RH male nut

Flow Rates: Refer to curves on pages 61 thru 62 for data on selected regulator flow rates.
 See instruction literature F-15-396 for flow rates on R-6700 series regulators.

Replacement Gauges

Replacement Gauges for Regulators

- Easy-to-read dial markings
- Durable 1/4-turn Lexan crystals
- 6 o'clock nipple position for most convenient gauge reading
- Specially packaged for showroom display
- Plain white face models for use on regulators of any make

¹Dial shade refers to decorative background color: Red - fuel gas; Green - oxygen; White - for any gas that is not oil pumped.
Gauge markings: "USE NO OIL." "RB" models are for acetylene. Blue - for any gas EXCEPT oxygen. Used on all inert gas regulators.

¹Dial actually marked with fractional contents of acetylene cylinders (1/4, 1/2, 3/4, full).

Valves

Single & Double Shutoff Valves

- V-26 - for quick-acting on/off control of oxygen
- V-27 - used in flame-hardening, machine cutting, etc., for quick-acting on/off control of oxygen and fuel gas with a single lever
- V-30 - used in electric welding for on/off control of argon and water
- V-31 - used in oxy-fuel gas welding for control of stop/start operations; two models are available which vary only in pilot light assembly

Steel Industry Products

Quality. Experience. Service. The Most Complete Product Line.

When it comes to exceeding your expectations for steel industry products, only one company does it all - ESAB!

Top Quality

If you want the best quality, reliability, and safety, count on ESAB. With some of the industry's most well-known and widely trusted names, such as OXWELD®, you never have to worry that your equipment is second best.

Unsurpassed Experience

We've been leading the steel industry products market for more than 85 years. Our advanced research, development, and design capabilities, along with continuous monitoring of consumer demands, have kept us at the forefront and allowed us to meet your changing needs.

Superior Service

At ESAB, we do much more than supply your products. Our staff of sales and engineering professionals can help make your job easier, faster, and more economical. We understand the unique and challenging demands of steel production, and we provide solutions. We help you select the right equipment for compliance with OSHA requirements.

Hand Cutting Torches

Steel Industry Products

OXWELD C-63

- Cutting range 9-60 in. (229-1524 mm)
- Alternate fuels
- Separate preheat and cutting oxygen inlets
- Off-center 180° head allows kerf to be widened by rotating torch; torch can then be inserted into kerf to deepen cut
- Use 1808 series cutting tips

C-63

C-66-1400

PM-GST

C-66-1400 Series

- Cutting range 3-28 in. (76-711 mm)
- Alternate fuels
- Reliable emergency hand cutting in production mill environments
- Designed for extra heavy-duty operations for long trouble-free service life
- Torch lengths from 2.5-17 ft. (0.8-5 m)
- Torches 9 ft. (2.7 m) and over have protective out channel
- Off-center 180° head allows kerf to be widened by rotating torch; torch can then be inserted into kerf to deepen cut
- Use 1400 series cutting tips
- Fast, efficient scrap cutting

OXWELD PM-GST¹

- Cutting range 3-16 in. (76-406 mm)
- Alternate fuels
- Reliable emergency hand cutting production mill environments
- Designed for extra heavy-duty operations for long trouble-free service life
- Superior emergency torch capability
- High stand-off 4-6 in. (102-152 mm)
- Pilot flame modes saves gas in stand-by mode, ready for immediate use
- Use standard PM-100/PM-200 cutting tips
- This torch cannot pierce plate
- Post mix design prevents flashbacks

Machine Cutting Torches

Steel Industry Products

OXWELD C-67-1400

- Cut steel up to 30 in. (762 mm) thick
- Low- and medium-pressure alternate fuels
- Three hose connections - separate cutting oxygen
- Straight line, shape, or scrap cutting
- Use high performance 1400 series cutting tips
- Mounts in standard torch holders

OXWELD C-43E

- Cut steel up to 30 in. (762 mm) thick
- Medium-pressure alternate fuels
- Water-cooled
- Three hose connections
- Straight line, shape, or scrap cutting
- Use high performance 1400 series cutting tips

OXWELD PM-100, PM-200 & PM-300

- Cutting range with alternate fuels:
PM-100: 16 in. (406 mm)
PM-200: 24 in. (610 mm)
PM-300: 40 in. (1016 mm)
- Gases mixed outside torch - safe, trouble-free operation
- Convection, air, or water-cooled
- Automatic cut-off or shape cutting operations
- High stand-off keeps high-speed cutting tips clean
- PM-100 has 1-3/8 in. (35 mm) barrel, PM-200 and PM-300 have 2 in. (51 mm) barrel
- Post-mix design does not permit piercing of plate

OXWELD C-60

- Cut steel 25-60 in. (635-1524 mm)
- Medium-pressure alternate fuels including acetylene
- Short and long versions available with or without tube and rack assembly
- Use 1701 and 1702 series cutting tips

OXWELD C-100

- Cut steel 40-96 in. (1016-2438 mm)
- Medium-pressure alternate fuels
- Special ball seat cutting tips

OXWELD® Lance

Steel Industry Products

V-24 Oxygen Lance

- Reliable lancing for steel mill, foundry, production, and scrapping applications
- Lever-operated valve for dependable ease-on and quick shut-off of oxygen
- Quick connect pipe chuck grips pipe firmly
- Neoprene seals prevent leakage around lance pipe
- Compact and durable
- Uses schedule 40 black iron pipe

1431 Series Tips: Cutting speeds are based on cutting steel at temperatures over 1,000°F (1,832°C), and have tapered divergent cutting bores. These tips are used in continuous casting cut-off or plate ripping applications where it is necessary to slice through quickly.

Given pressures are torch inlet pressures, not what to set regulator at; hose length, diameter, flash arrestor use, and many other factors affect pressure. Use test gauge adaptors to check pressure at back of torch.

¹Read from gauge mounted on torch.

²Preheat oxygen flow is given as 50% of natural gas flow for a 1.5 oxygen to 1.0 natural gas ratio. This oxygen/natural gas ratio produces a long inner cone flame length which is used for most heavy cutting operations.

Given pressures are torch inlet pressures, not what to set regulator at; hose length, diameter, flash arrestor use, and many other factors affect pressure. Use test gauge adaptors to check pressure at back of torch.

Hose Sizes: For oxygen, use "C" size hose (1/2 in. I.D.), Part Number 2120399 (50 ft.).

For fuel gas, "B" size hoses (3/8 in. I.D.), Part Number 2120404.

Given pressures are torch inlet pressures, not what to set regulator at; hose length, diameter, flash arrestor use, and many other factors affect pressure. Use test gauge adaptors to check pressure at back of torch.

Powder Equipment

Steel Industry Products

- Rapidly cut any thickness stainless steel, cast iron, and high alloy steels
- As simple to use as regular cutting torches
- Manual or mechanized versions available

AC-4 torch

AC-4 Powder Cutting Hand Torches

- Capacity 10 in. (254 mm) thick stainless steel
- Acetylene or alternate fuels
- Single lever control
- Self contained

Powder Attachments for Standard OXWELD Torches

- Single- and Dual-Tube for straight-line cutting
- Multi-Jet for shape cutting applications
- See next page for details

AC-4 Powder Cutting Tips

- Powder flows between sleeve and tip
- Made from pure copper - rapid heat transfer
- Chrome plated powder flow surfaces for protection from wear

AC-4 tip

Powder Equipment

Steel Industry Products

Powder Dispensers

- Heavy welded steel construction
- Hinged lid with heavy-duty closures
- Inlet gas filter and moisture trap
- Pop-off safety valve
- Screen filter sifts out lumps of powder
- Manual and automatic models

Manual Powder Dispensers

- Manual 100 and 400 lbs. (45 and 181.5 kg) dispensers designed for general powder cutting or lancing operations

Powder dispenser - 100 lbs. (45 kg)

Automatic Powder Dispenser

- Automatic 400 lbs. (181.5 kg) powder dispenser designed for automatic or semi-automatic machine cutting
- Equipped with electric powder valve and nitrogen gas purging
- Controlled by interfacing the cutting machines logic with the dispenser powder and gas controls

Options & Accessories

High Precision Cutting Ejector

For fine control and maximum economy when cutting materials less than 2 in. (51 mm) thick 65Z49

Powder Supply Hose

Fitted clear vinyl hose, 50 ft. (15 m) long..... 2119297

Inlet Nitrogen Hose

Fitted black rubber hose, 110 ft. (33.5 m) long.... 2211347

Cover Gaskets

100 lbs. (45 kg) dispenser 5279191

400 lbs. (181.5 kg) dispenser 2225204

Powder Attachment Ordering Information

Torch Type	Type Attachment	Part Number	Accessory Powder Valve
C-37, C-39, C-67 (mechanized) and other 1500 Series models	Single-Tube	60Y98	not required
PM-200 (mechanized)		2227380	
C-100 (mechanized)		2028213	
C-31, C-32, C-66 (manual with 75° head)	Multi-Jet ¹	61Y59 (1500-ACA-2)	not required
		61Y60 (1500-ACA-1)	
		61Y61 (1500-ACA-2)	
C-31, C-32, C-66 (manual with 90° head)	Multi-Jet ¹	61Y58 (1500-ACA-1)	not required
		61Y56 (1500-ACA-2)	
		61Y57 (1500-ACA-1)	
C-37, C-39, C-67 (mechanized)			

¹Select the correct model based on the type tip being used. The 1500-ACA-2 attachment is limited to one-piece tips having a tapered front end as follows: 1514 Series through size 4, 1563 Series through size 6, 1564 Series, 1565 Series through size 3. The 1500-ACA-1 attachment accepts all other 1500 Series Cutting Tips.

Regulators

Steel Industry Products

High Pressure Regulators

- Typical applications include cartridge filling, pressure testing of vessels, and pressurization of recoil cylinders
- For high delivery pressures - 200-4,000 psig (1,380-27,600 kPa)
- Standard HP cylinder connections - ready to use on cylinders or manifolds
- Standard 1/4 in. NPT-37° flared tubing outlet connection on R-89 models
- Forged brass bodies
- Models available for higher inlet pressure inert gas cylinders

R-89-4M

Specifications & Ordering Information

Cylinder Gas	Model	Part Number	Maximum Delivery Pressure		CGA Connections		Pressure Gauges	
			psig	kPa	Inlet	Outlet	Inlet	Outlet
High-Pressure Regulators								
Inert Gases	R-89-3M-580	103X85	3,000	13,800	580	flare	4,000	4,000
	R-89-4M-680	19017	4,000	13,800	680	flare	6,000	6,000

Gas Apparatus

High Capacity Industrial Gas Regulators

- Pilot operation controls delivery pressure within 3% of maximum rated pressure if operated at more than 10% capacity
- High flow capacity up to 200,000 cfh for mill, foundry, and other industrial applications requiring consistent process control
- Where demand exceeds flow of a single regulator, multiple units can be installed in parallel

R-52

Specifications & Ordering Information

Gas Service	Model	Part Number	Maximum Inlet Pressure	Maximum Delivery Pressure	Inlet and Outlet Connection		Rated Capacity
			psig	psig	in.	mm	
Oxygen	R-52	20A16	350	150	3/4 NPT	19 NPT	10,000
Oxygen	R-52-200	2117105	350	200	3/4 NPT	19 NPT	10,000
Oxygen	R-83	2103822	350	150	2 NPT	51 NPT	40,000
Acetylene	R-5210	524193	15	12	3/4 NPT	19 NPT	2,000
Fuel Gas	R-99	04X50	350	40	3/4 NPT	19 NPT	3,000
Fuel Gas	R-84	2103957	150	40	3/4 NPT	19 NPT	8,000

In most instances, capacity is much higher than listed. This will depend upon outlet pipe/hose restrictions. Consult ESAB for recommendations.

Regulation Panels

Steel Industry Products

Regulation Panels

- Meets OSHA requirements for piping safety
- Two and three outlet versions
- Portable or permanent process gas distribution
- Include all valves, safety devices, and filter for reliable long life
- Standard-Flow and High-Flow versions

2-Hose Standard-Flow Panel

3-Hose High-Flow Panel

Flashback/Backflow Protective Devices

Steel Industry Products

H-14 & H-16 Dry Type Protective Devices

- Rated fuel gas capacities to 300 cfh
- Meets OSHA requirements and NFPA standards
- No liquid - requires no filling or cold weather maintenance
- Heavy-duty steel shell construction
- Models for all fuel gases
- Ideal for station service or portable outlet headers
- Flashback and backflow protection to satisfy OSHA regulations
- Contains relief valve

H-14

Filters, Check/Relief/Dual Shutoff Valves

Steel Industry Products

High Capacity Line Filters

- Remove dirt, scale, and foreign materials from pipelines
- Prevent damage to valves, regulators, torches, etc.
- Reduce possibility of combustible particles igniting in pipeline
- 40 micron rating on 1 in. (25.4 mm) and 2 in. (51 mm) sintered bronze elements
- 140 mesh screen on 3 in. (76 mm) screen filter

2 in. (51 mm) filter

998228	CV-7		639720	Inert Gas	CGA-032 (5/8 - 18 RH female) ³	-

Maximum Operating Pressure for all Shutoff/Check Value Combinations is 200 psig.

¹Combination Part Number includes both shutoff valve and check valve.

²For connection to regulators with "C" size inlets.

³For connection to hose with "B" size fittings. Oxygen check valves are supplied, assembled, and sealed to the station valves; all other combinations are supplied unassembled.

⁴This Part Number is for check valve only.

⁵Any common non-corrosive, non-toxic industrial gas.

PREST-O-LITE® Air Gas Outfits

4-in-1 Outfit with Soft Flame Tips

- For all purpose soldering, heating, and brazing
- Meets most industrial demands
- "B" tank and "MC" tank models available
- Interchangeable tips - for proper flame size and heat
- Change tips in seconds - no tools necessary; tips lock in any working position
- Common torch handle - provides equivalent of five outfits
- Adjustable pressure regulator for steady gas delivery and stable flames

Ordering Information

4-in-1 Outfit

"B" Tank 30X63
"MC" Tank 30X64

Gas Apparatus

Swirljet® Outfit

- For faster soldering and brazing
- Superhot flame from Swirljet tips will silver - or alloy-braze pipe - faster than a conventional flame
- More effective - flame concentrates heat on work where needed; less waste
- Shorter wraparound flame allows soldering of joints within an inch of walls or woodwork without damaging or discoloring
- Efficient - for use under all weather conditions; wind will not deflect high velocity flame
- Adjustable pressure regulator with contents gauge and delivery pressure indicators on pressure adjustment knob

Ordering Information

Swirljet Outfit "B" Tank 998623

PREST-O-LITE® Air Gas Outfits

General Purpose Air-Acetylene Outfits with Soft Flame Tip

- For sweat-type fittings, heating, and brazing
- Ideal for copper, brass, steel, and wrought iron pipe with solder-type fittings
- Precision flame control - for joints near a wall, against each other, and in hard-to-reach places
- Instant heat - 4,000°F (2204°C), without pumping or priming
- Convenient - small, light, easy to handle, and always ready to use
- Efficient - ample range for run-of-shop work; unaffected by drafts, wind, and rain
- "B" tank and "MC" tank models available
- Adjustable pressure regulator with contents gauge and delivery pressure indicators on pressure adjustment knob

Swirljet® Tips

In the Swirljet tip, mixed gases (air and fuel) are swirled at very high velocity through a propeller-like set of vanes at the rear of the flame tube. This swirling produces a much hotter, relatively short flame that concentrates heat output on the work. Swirljet tips are available for air-acetylene and air-fuel gas use.

- Superior to standard tips - provide maximum effective heating power
- Short wrap-around flame for close work - no heat damage to walls or woodwork as close as 1 in. (25 mm) away
- All weather use - protected, high velocity flame works in wind, rain and sub-zero temperatures
- Interchangeable with PREST-O-LITE 403 torch handle
- Run quieter, cooler, and give better heat transfer than other comparable tips

Operating Pressures

Swirljet air-acetylene tips require a minimum acetylene pressure of 13 psig and are so labeled. Do not use with any regulator preset to deliver 10 psig or less. Swirljet air-fuel gas tips require pressure of 24 psig with propane, 32 psig with propylene, and 36 psig with MAPP. Operating at too low a pressure will cause overheating at the flame tube.

POL Swirljet Tips - Acetylene

PREST-O-LITE® Accessories

POL Purging & Pressure Testing

Using a refrigerant for purging contaminants from a system is no longer acceptable. To remove contaminants from a system and remain environmentally safe, use dry nitrogen. To assure the system is clean of contaminants before charging with refrigerants, purge the system with low pressure dry nitrogen when brazing. Testing a system for leaks with nitrogen will save time and money. PREST-O-LITE's Nitrogen Regulator R-36-500-580 can deliver up to 500 psig to pressurize a system for leak testing at operating pressure. Always use manufacturer's recommended specifications for maximum test pressure before testing.

HELMETS AND HEAD PROTECTION

New-Tech™ ADC Plus Helmets

The New-Tech ADC Plus series of auto-darkening welding helmets offer the latest in safety technology. The new Angular Dependence Compensation Plus (ADC) feature ensures that the selected shade covers the full width and height of the LCD screen, plus improves color definition and contrast throughout the cartridge. With a wide viewing area, New-Tech ADC Plus helmets give you a feeling of increased space awareness. The helmet is designed to meet the requirements of all position welding including overhead welding.

The New-Tech ADC Plus models are very lightweight and balanced, and the headgear can be adjusted for maximum comfort. The helmet's shell is designed to give maximum protection to your face, neck, and ears. You'll also be able to breathe easy, thanks to a large area in front of the mouth that ensures proper flow of fresh air and low levels of CO₂. The black finish on the exterior shell of the New-Tech ADC Plus helps to reflect heat and increases the helmet's resistance to high temperatures. Cartridges are powered by solar cells and automatically activated by light. And you can work with confidence, knowing Weld Warrior™ New-Tech ADC Plus helmets are ANSI approved.

New-Tech 6-13 XL ADC Plus

0700 000 955

The New-Tech 6-13 XL ADC Plus can be used for almost any welding application with adjustable shade levels from DIN 6 to DIN 13. The helmet features a grinding mode, which allows the ADF screen to be switched off for grinding, and has sensitivity and delay functions. The XL lens measures 3.77 x 2.96 in. (96 x 68.5 mm), offering you an increased field of vision.

New-Tech helmets available in USA only.

New-Tech 9-13 ADC Plus

0700 000 957

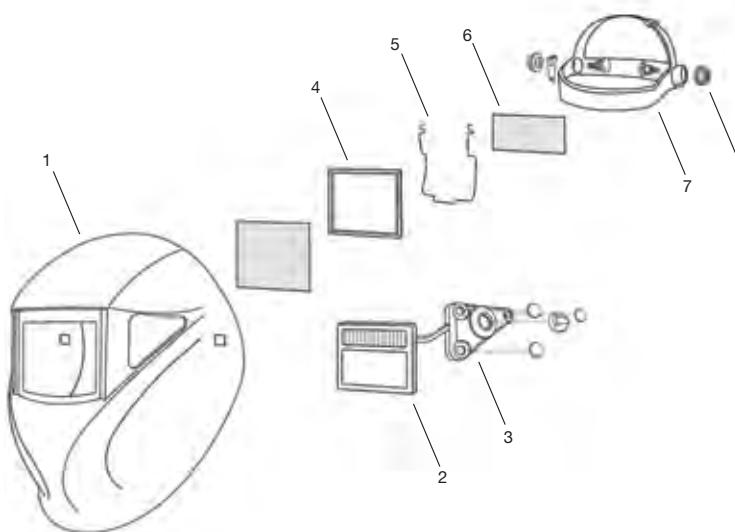

The New-Tech 9-13 ADC Plus is suitable for GTAW, GMAW, SMAW, and gas welding and cutting. The helmet offers a cartridge that improves color and light contrast – allowing you to distinguish colors through the lens in an open and activated state. Settings such as shade level DIN 9-13, sensitivity, and delay are made from the outside of the helmet.

HELMETS AND HEAD PROTECTION

Aristo® Tech 9-13 Helmet

The Aristo Tech helmet is designed for the professional welder who wants the best in protection and performance. The helmet features ADF technology and has an internal LCD display, providing the welder full control to adjust shade level from DIN 5 to DIN 13. The helmet also has sensitivity and delay settings with precision for any welding application. The Quick Set™ feature allows for easy change of shade with a simple up-and-down flick of the switch. The Aristo Tech Grind mode is activated at the lowest sensitivity.

The light-weight shell and ergonomically designed head gear offers maximum comfort even when welding for long periods of time. The operator has the ability to move the helmet closer or further away from the face, making it comfortable and easy to wear.

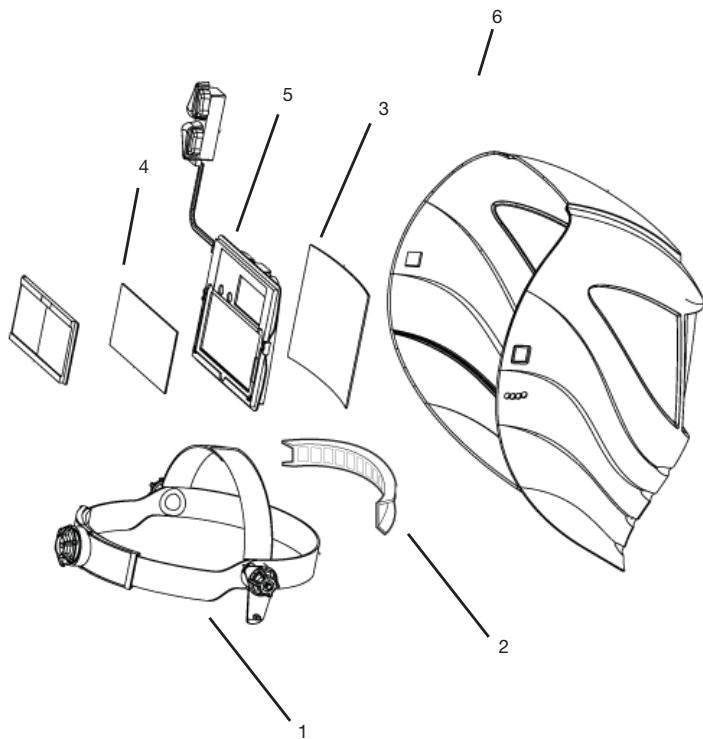

The Aristo Tech 5-13 weighs only 1 lb. (0.5 kg) and is suitable for GMAW, GTAW, SMAW, grinding, and manual plasma cutting. The helmet is designed to meet the requirements of all position welding including overhead welding. Aristo Tech helmets are ANSI approved.

HELMETS AND HEAD PROTECTION

Warrior™ Tech 9-13 Helmet

The Warrior Tech helmet is designed to meet the needs of welders, featuring a high-tech, lightweight shell for protection from heat, sparks, and spatter.

The large welding lens provides optimal viewing area with excellent quality using the latest auto-darkening filter (ADF) technology.

The Warrior Tech 9-13 features external shade adjustment between DIN 9 and DIN 13, and optical class 1/2/1/2. Delay and sensitivity can be adjusted from the inside.

The Warrior Tech also features four arc sensors for higher response and wider coverage and a large viewing area of 3.85 x 1.88 in. (98 x 48 mm) providing a wider field of vision and increased spatial awareness.

Sensitivity control is an adaptable feature useful when welding low amperages (GTAW) for better reaction to darker arc light. The helmet also features delay control enabling the welder to set how long the lens stays dark after the welding arc stops. Short delay helps get the job done faster during tack welding, whilst longer delay is useful for high amperage welding.

HELMETS AND HEAD PROTECTION

Globe-Arc Helmet

The Globe-Arc helmet provides outstanding protection for all kinds of metal working including arc welding, grinding, gas cutting, gas welding, and plasma cutting. Its design is unique to flip-front and grinding helmets, and is equipped with strong, comfortable headgear. The Globe-Arc's visor, along with a combination of inner and outer lenses, provides full protection against IR, UV, and visible light. Plus, inner lenses are available in a variety of different shades – DIN 2, DIN 3, and DIN 5.

Globe-Arc Shade 7 0700 000 308

Globe-Arc Shade 10 0700 000 947

Globe-Arc Shade 11 0700 000 943

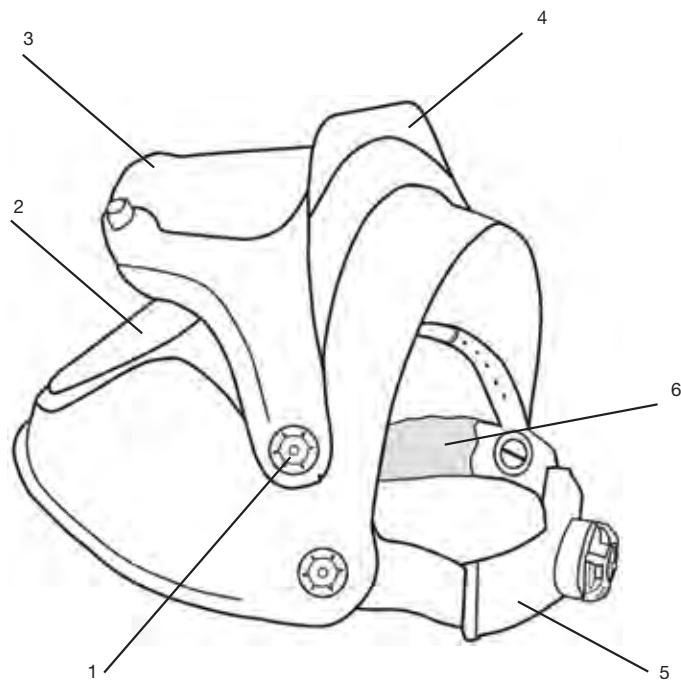

Globe-Arc helmets available in USA only.

HELMETS AND HEAD PROTECTION

Proban® hood

0000 593 269

Flame-resistant head protection that covers the head, neck, and shoulders.

Insulated helmet liner

0000 904 378

The insulated helmet liner is worn underneath the welding helmet to offer protection when working in a cold environment.

Hard hat for New-Tech

The hard hat for New-Tech provides you with the lightest, strongest, and most comfortable helmet available. The hard hat is manufactured from ABS material, and weighs less than a pound. Head gear is equipped with a ratchet adjustment for easy adjustment and comfort.

Hard Hat – Yellow

0700 000 052

Adaptor for hard hat

0700 000 230

HELMETS AND HEAD PROTECTION

Leather helmet pad

747F92

Made of top-grain cowhide with foam cushion and rust-resistant hardware to provide ultimate protection and comfort.

Welder's cap

Cap to be worn under helmet to protect your head and hair.

Size S 781F96

Size M 781F97

Size L 781F98

WELDING GLOVES

Gloves for GMAW/SMAW

Curved GMAW glove

Weld Warrior gloves offer a whole new approach to fit, form, and function. Ergonomically designed to fit the natural curve of the hand, these GMAW gloves are made from heavy and fine-cut leather, and are lined from hand to cuff. With the curved design, the glove fits the hand perfectly, and also has a flexible wrist area that reduces friction. With welted seams, Kevlar® stitching, and reinforced thumb, Weld Warrior gloves are ultra strong and offer the highest level of protection.

Size L 0700 005 043

Size XL 0700 005 040

Heavy-duty black glove 0467 222 007

A welding glove made of black, strong cow-grain leather. High dexterity with Kevlar® stitching ensures that the glove can resist hard mechanical stress. The gloves are also fully welted.

Heavy-duty aluminized glove 0700 005 010

A welding glove with two layers of cowhide capable of withstanding extreme heat – suitable for tubular wire welding. The facing of aluminum-coated PFR rayon reflects 95% of the thermal radiation. Gloves are padded with COMFOflex®, and sewn with fourfold Kevlar.® The thumb is angled for high comfort.

All Weld Warrior gloves have a high resistance to heat and offer additional protection against spatter.

 Tested against mechanical stress such as abrasion, cut, tear, and puncture.

 Tested for thermal performance, such as exposure to an open flame, contact heat, convective heat, radiant heat, and small and large splashes of molten metal.

WELDING GLOVES

Gloves for GTAW and general handling

Curved GTAW glove

You've never worn a GTAW glove quite like this. These Weld Warrior gloves are ergonomically designed to fit the natural curve of the hand, giving you quality and comfort like none other. Made from thin, high-quality leather with improved fit for higher dexterity, the gloves are highly durable, with welted seams and Kevlar® stitching. They're also extremely lightweight for additional comfort.

Size L **0700 005 041**

Size XL **0700 005 042**

GTAW professional glove **0701 415 963**

A quality GTAW gauntlet with a reinforced thumb and 5.1 in.-long leather cuff. The palm is fully lined for increased comfort and protection.

EYE PROTECTION

Safety glasses

Weld Warrior safety glasses are used for drilling, chipping, and metalworking. They have a sporty style, are soft to the touch, and have a lightweight wrap-around neck cord. The glasses are extremely flexible and durable, and are available in four different lens configurations that protect against UV radiation. Plus, all eyewear meets ANSI Z87.1 standards.

Warrior Clear **0700 012 030**

The clear lens is suitable when working indoors, providing general eye protection. Sold in multiples of 12 pairs.

Warrior Smoked **0700 012 031**

The smoked lens is suitable when working in strong ambient light. Sold in multiples of 12 pairs.

Warrior Amber **0700 012 032**

The amber (yellow lens) enhances the light – suitable when the ambient light is not sufficient. Sold in multiples of 12 pairs.

Warrior Shade 5 **0700 012 033**

The DIN 5 shade lens provides protection not only against IR/UV light, but also against the visible light during gas welding/cutting. Sold in multiples of 12 pairs.

Goggles

Goggle Shade 5 **17862**

A one-piece goggle with a soft molded body, indirect ventilation, and a 4 x 1.75 in. lens aperture. The goggle is fitted with a Shade 5 filter, and will fit over prescription glasses.

ACCESSORIES

Magnifying lenses for New-Tech

The New-Tech helmet can be equipped with a magnifying lens. The magnifying lens is fitted from the inside (so no adaptor is needed). Four different diopters are available: +1.0 / +1.5 / +2.0 / +2.5.

Diopter +1.0	0700 000 084
Diopter +1.5	0700 000 085
Diopter +2.0	0700 000 086
Diopter +2.5	0700 000 087

Easy-Lite

0700 014 040

The Easy-Lite is a small but effective light source that can be easily attached to your welding helmet, hard hat, safety glasses, or anywhere that additional light is required. It's also an excellent tool for adapting to a stainless steel inspection mirror. The bright LED is perfect for highlighting the weld in difficult places where there is insufficient light. Operation is a cinch – just turn it on by a simple swing. Also, the battery has over 50 hours of life.

CLOTHING

Proban® jacket

Weld Warrior Proban®/leather jackets are designed for maximum comfort and safety. Sleeves and shoulders are made of durable grade-A leather to withstand the exposure to welding spatter. The front and back are made from flame-retardant Proban material. The jacket features concealed inner pockets, adjustable sleeves, a stand-up collar, and Kevlar® stitching.

Size L	0700 010 302
Size XL	0700 010 303
Size XXL	0700 010 304

CLOTHING

FR line

ESAB's FR line of flame retardant clothing is designed to give maximum protection to the professional welder while providing comfort in the most demanding environments.

Garments are made with Phoenix FR material, which gives the clothing 100% FR protection for the lifetime of the garment. There are no worries of washing out or wearing down the flame retardant fibers as these properties are an inherent part of the garment.

Cutting

ESAB Cutting Systems

At ESAB, we're more than just order-takers, we're cutting experts, consultants, and partners.

And our history speaks for itself. With roots dating back to the early 1900s, we've been constant industry innovators for over a hundred years. We even hold the original patent for plasma cutting.

Since we manufacture the entire system, write our own software, and stand behind everything we make - there's no need for you to juggle different vendors to support individual components.

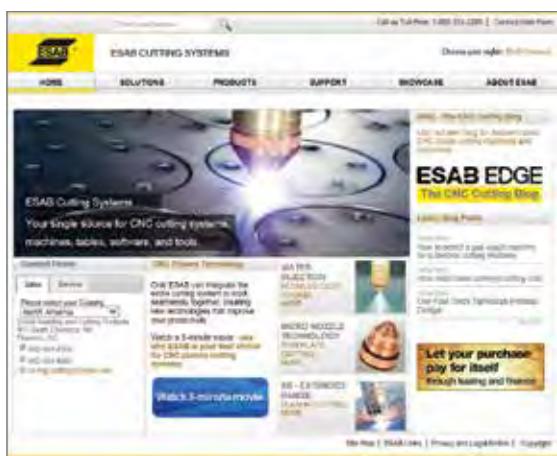

We offer everything from the simplest systems to the most complex - all from one reliable source. And as the only supplier that makes the entire system, only ESAB can integrate everything to work seamlessly together, creating new technologies that improve your productivity:

- **Precision Hole Technology, which vastly improves plasma hole quality**
- **Smart Voltage Height Control, which automatically compensates for electrode wear, ensuring best cut quality and maximum consumable life**
- **Smart Cycle Technology, which boosts productivity by streamlining process control and tool motion**

Whether upgrading an old machine or investing in a whole new system, we help you achieve your goals. And because we make the entire system, one call is all it takes to get professional support for everything. We also offer many value-added services that other suppliers can't, like free annual checkups, free torch replacement, and extended warranties!

The products offered in this catalog are our light-duty solutions. For the complete ESAB Mechanized Cutting product offering, including medium- and heavy-duty cutting systems, please visit www.esab-cutting.com, order our Mechanized Cutting Systems catalog MCUT-3078, or call us at 1.888.372.2288.

Plasma

Oxy-Fuel

Laser

Waterjet

- Solid state control
- Convenient, easily accessible controls
- Sturdy, one-piece, cast aluminum housing
- Knurled drive wheels for positive traction
- 6 ft. (2 m) track lengths
- Wide variety of accessories for expanded capability
- Speed range 3-1100 ipm (0.8- 2.8 m/min)
- Extensive variety of accessory equipment for expanded capability
- Standard 115/220V, 50/60Hz input power

The Ultra-Line is a lightweight, portable carriage designed for straight-line cutting applications. Widely used in a small metal fabricating operation, shipyards, and steel mills, the Ultra-Line can be adapted to many special applications with a wide variety of accessory equipment.

The Ultra-Line's one-piece aluminum housing measures 16 in. (406 mm) long, 7-1/4 in. (184 mm) wide, and 5-3/4 in. (146 mm) high without torch rigging. Weight is approximately 22 lbs. (10 kg) without accessories.

Using an OXWELD® oxy-fuel-gas machine cutting torch, the Ultra-Line can cut plate up to 4 in. thick (101.6 mm). With an accessory heat shield, the Ultra-Line can cut material up to 6 in. thick (152 mm).

With Solid State Control, no "warm-up time" is required to start the carriage travel. The carriage is driven by a reversible DC motor with built-in solid state speed regulation.

Ultra-Line with C-58 Torch, Rigging Assembly, and Track

Options & Accessories continued

Counterweight 995587

Use when equipment mounted on one side of carriage causes an imbalance.

Manifolding kit 639659

Provides convenient means of connecting oxy/fuel-gas from regulators to torch.

Circle cutting attachment 16V84

Consists of an 18 in. (0.5 m) radius bar and pivot system, permitting 2-54 in. (0.05-1.4 m) diameter circle cutting.

Two torch operation 16V89 or 16V92

Adaptors that allow cutting with two torches.

Vertical post 491620

Allows cutting in the vertical plane.

Valve block assembly 07X26

Allows adjustment of oxy-fuel-gas flows on valveless torches.

Cutting Torch

Various devices that attach to an OXWELD cutting torch for versatility and added capabilities.

Quick acting valve assembly 32Y08

Substitutes for the standard cutting oxygen throttle valve.

Adjustable bevel cutting adaptor 18845

Connects to the torch like a nozzle and can be adjusted 0-90° from the torch center line.

Auxiliary Preheat Kits are available for preheating the plate ahead of the cut. Mounted to the bevel cutting adaptor:

Acetylene 61Y99

Other fuel gas 63Y13

Scissor-type slitting adaptor 22X42

Divides cutting operation into two nozzles to make parallel cuts ranging from 1-1/2 to 12 in. (38.1-304.8 mm) wide. The adaptor is mounted to the torch in place of the standard single nozzle.

Two-way inlet adaptor 18X20

Allows one oxygen inlet hose to supply preheat and cutting oxygen to a three inlet torch.

Ordering Information

Model	Power	Part Number
Basic Machine ¹	110V	2237258
Basic Machine with Torch-Acetylene ²	110V	2237262
Basic Machine with Torch-Propane ²	110V	2237266

Speed Range is 3-110 ipm (0.8-2.8 m/min).

¹Includes 6 ft. (10 m) track and torch holder.

²Complete with 6 ft. (10 m) track, torch holder, torch, and 3 tips.

Options & Accessories

Ultra-Line

Torch rigging assembly 16V90

Includes mounting unit, a 24 in. (609.6mm) rack, and torch holder.

Track - 6 ft. (10 m) V-grooved guide rail 16V82

Sections can be linked to extend length.

Heat shield kit 995586

For use with prolonged cutting, cutting thick material, or cutting close to carriage.

Ultra-Graph™

- Simple, accurate, magnetic tracing system lets you reproduce quickly and precisely, at speeds from 4-150 ipm (1.0-3.8 m/min)
- Variable-speed direct drive motor performs smoothly and dependably
- Cut shapes accurately and economically with a single-torch system that's become the industry standard
- Put all machine functions at your fingertips with the RC or DC series Ultra-Graph controls

Since its introduction decades ago, the Ultra-Graph has become the industry standard for single torch contour cutting. Many fabricating shops have found the Ultra-Graph to be a practical, dependable design that allows cutting highly complex shapes inexpensively and accurately, in a fraction of the time required by other means.

A magnetic rotor follows the contours of a metal template. In turn, it guides the cutting arm and torch with exceptional precision. The Ultra-Graph can be either a floor standing or table mounted model, each providing a 60 in. (1.5 m) cutting radius.

Cutting and tracing speeds range from 4-150 ipm (1.0- 3.8 m/min), selectable by size of the magnetic rotor. The speed range required depends on the application, plate thickness, type of material and process. Rotors are available from 1/8 in. (3.2 mm) to 7/8 in. (22 mm), in 1/16 in. (1.6 mm) increments. The direct-drive motor allows precise speed control. The Ultra-Graph can be used for oxy-fuel or plasma-arc cutting or plasma, GMAW, and GTAW welding.

Specifications

Ultra-Graph	
Operating radius, in. (m)	60 (1.5)
Circle - max. diameter, in. (m)	55 (1.4)
Straight - line - max., in. (m)	110 (2.8)

Ultra-Line™ & Ultra-Graph™ Plasma Options

- Easily upgrade from oxy-fuel to plasma cutting
- Easily switch between oxy-fuel and plasma cutting
- PT-37 air plasma torch features same diameter as oxy-fuel torches
- PT-37 torch includes rack for adjustment by manual torch holder
- PowerCut® 1300 and 1600 plasma systems featuring 70 or 90 amps

Both the Ultra-Line and Ultra-Graph machines may be equipped with a plasma cutting torch by ordering the following accessories: Plasma Cutting Torch, Plasma Power Supply, Plasma Torch Consumables, and Remote Control Switch.

Options & Accessories

1. PT-37 Plasma Cutting Torch

The PT-37 Torch includes a gear rack mounted to the side of the torch for manual vertical adjustments.

PT-37 torch with 25' leads..... 0558004862
PT-37 torch with 50' leads..... 0558004863

2. Plasma Power Supply

Choose one of the following:

PowerCut 1300, 70A power supply..... 0558007881
208/230/460V, 50/60Hz, 1/3ph.

PowerCut 1300, 70A power supply..... 0558007882
400V, CE, 50Hz, 3ph

PowerCut 1600, 90A power supply..... 0558007883
208/230/460V, 50/60Hz, 1/3ph

PowerCut 1600, 90A power supply..... 0558007884
400V, CE, 50Hz, 3ph

Note: "CE" Items are used outside North America

3. Plasma Torch Consumables

Choose the spare parts kit necessary to support the plasma amperage available from the selected plasma power supply:

60A 0558008248
70A 0558008247
90A 0558008889

4. Remote Control Switch

Allows manual control of plasma ON/OFF.

Remote control switch, 25 ft. (7.6 m) cable 0558005548
Remote control switch, 50 ft. (15.2 m) cable ... 0558005549

Ultra-Graph with plasma torch

Mechanized
Cutting

Silhouette™ 1000

- Rack-and-pinion drive in both axes
- Precision round rail system
- Expandable rail system in 15 ft. (4.5 m) sections
- Four station capacity
- HL-90 photo-optical tracer with command mark slowdown
- Forward offset for accurate corner cuts
- Tracing/cutting speeds from 2-120 ipm (0.5-3.0 m/min)
- Plates up to 4 in. (1.0 m) thick can be cut with a single oxygen/fuel-gas torch
- Automatic cutting oxygen shut-off

Silhouette 1000 with two motorized oxy-fuel torch stations

The Silhouette 1000 is ideally suited for a fabricating shop or maintenance department needing a high quality, photo-optical controlled shape cutting system.

All of the features combine into a system that gives the Silhouette 1000 the precision and stability needed for consistent, accurate cutting. Rack-and-pinion drives, rugged cross beam, and hardened round rails are standard equipment. Cutting and tracing widths of 4 and 6 ft. (1.3 and 1.8 m) are available.

With optional rail extensions and extra tracing tables, length can be established as required for your application.

The HL-90 will dependably give you years of service tracing lines as narrow as 0.030 in. (0.7 mm) at speeds from 2-118 ipm (0.05-3.0 m/min). Forward offset provides accurate corner cuts, while kerf compensation is adjustable up to 1/8 in. (3.2 mm). Cutting parameters are controlled from the HL-90 control panel including: direction of travel, speed, operating mode, power, and cutting oxygen.

The Silhouette 1000 has the capacity to handle up to four cutting stations. Station configurations can include four oxygen/fuel-gas torches, one plasma torch or combine up to three oxygen/fuel-gas stations and one plasma station. Optional manual/motorized lifts are available as well as a festoon system to ease movement of cables and hoses along the rail.

Ordering Information

- 3-axis gantry with rack-and-pinion drives
- Reinforced box beam design provides a solid, precision platform for the cutting tool
- Precision linear rail y-axis guide way for greater accuracy
- ESAB's Vision CNC, Windows®-based, networkable, with color LCD
- Digital AC drive amplifiers for years of maintenance free operation
- AC brushless motors for wide speed range with accurate speed control
- Precision, heavy-duty gearboxes for accuracy and smooth motion

The Combirex DX offers large gantry design and performance in a compact package. The rugged gantry features all-steel construction with machined mating surfaces for stiffness and accuracy. Heavy-duty H-beam weldments support triple machined T-rails to provide a sturdy, stable foundation, and easy installation on any concrete floor. Featuring a precision linear rail Y-axis guiding system, precision three-axis rack-and-pinion drives, digital AC drives and AC brushless motors, this machine delivers the cutting performance you would expect from much more expensive gantries.

The Combirex DX can be equipped with air plasma systems up 100 amps or ESAB's m³ Precision Plasmarc System, which allows the machine to cut and mark with the same plasma torch. The m³ system is available on the Combirex DX in 200 Amps, 360 Amps, and 450 Amps configurations.

The plasma station includes a pneumatically balanced initial height sensor along with an electrical clear-the-plate feature, for the softest, most accurate tool-tip initial height sensing. Arc Voltage Height Control provides accurate cutting height and a magnetic break-away crash protection system prevents torch damage in case of tipped parts.

The Combirex DX may be equipped with up to 4 oxy-fuel cutting stations. The stations feature heavy-duty motorized lifters with capacitive height control and pilot flame torch ignitors. An electronic proportional valve gas control sets high/low preheat pressures, cutting oxygen pressure, and pierce ramp automatically through the built-in process database.

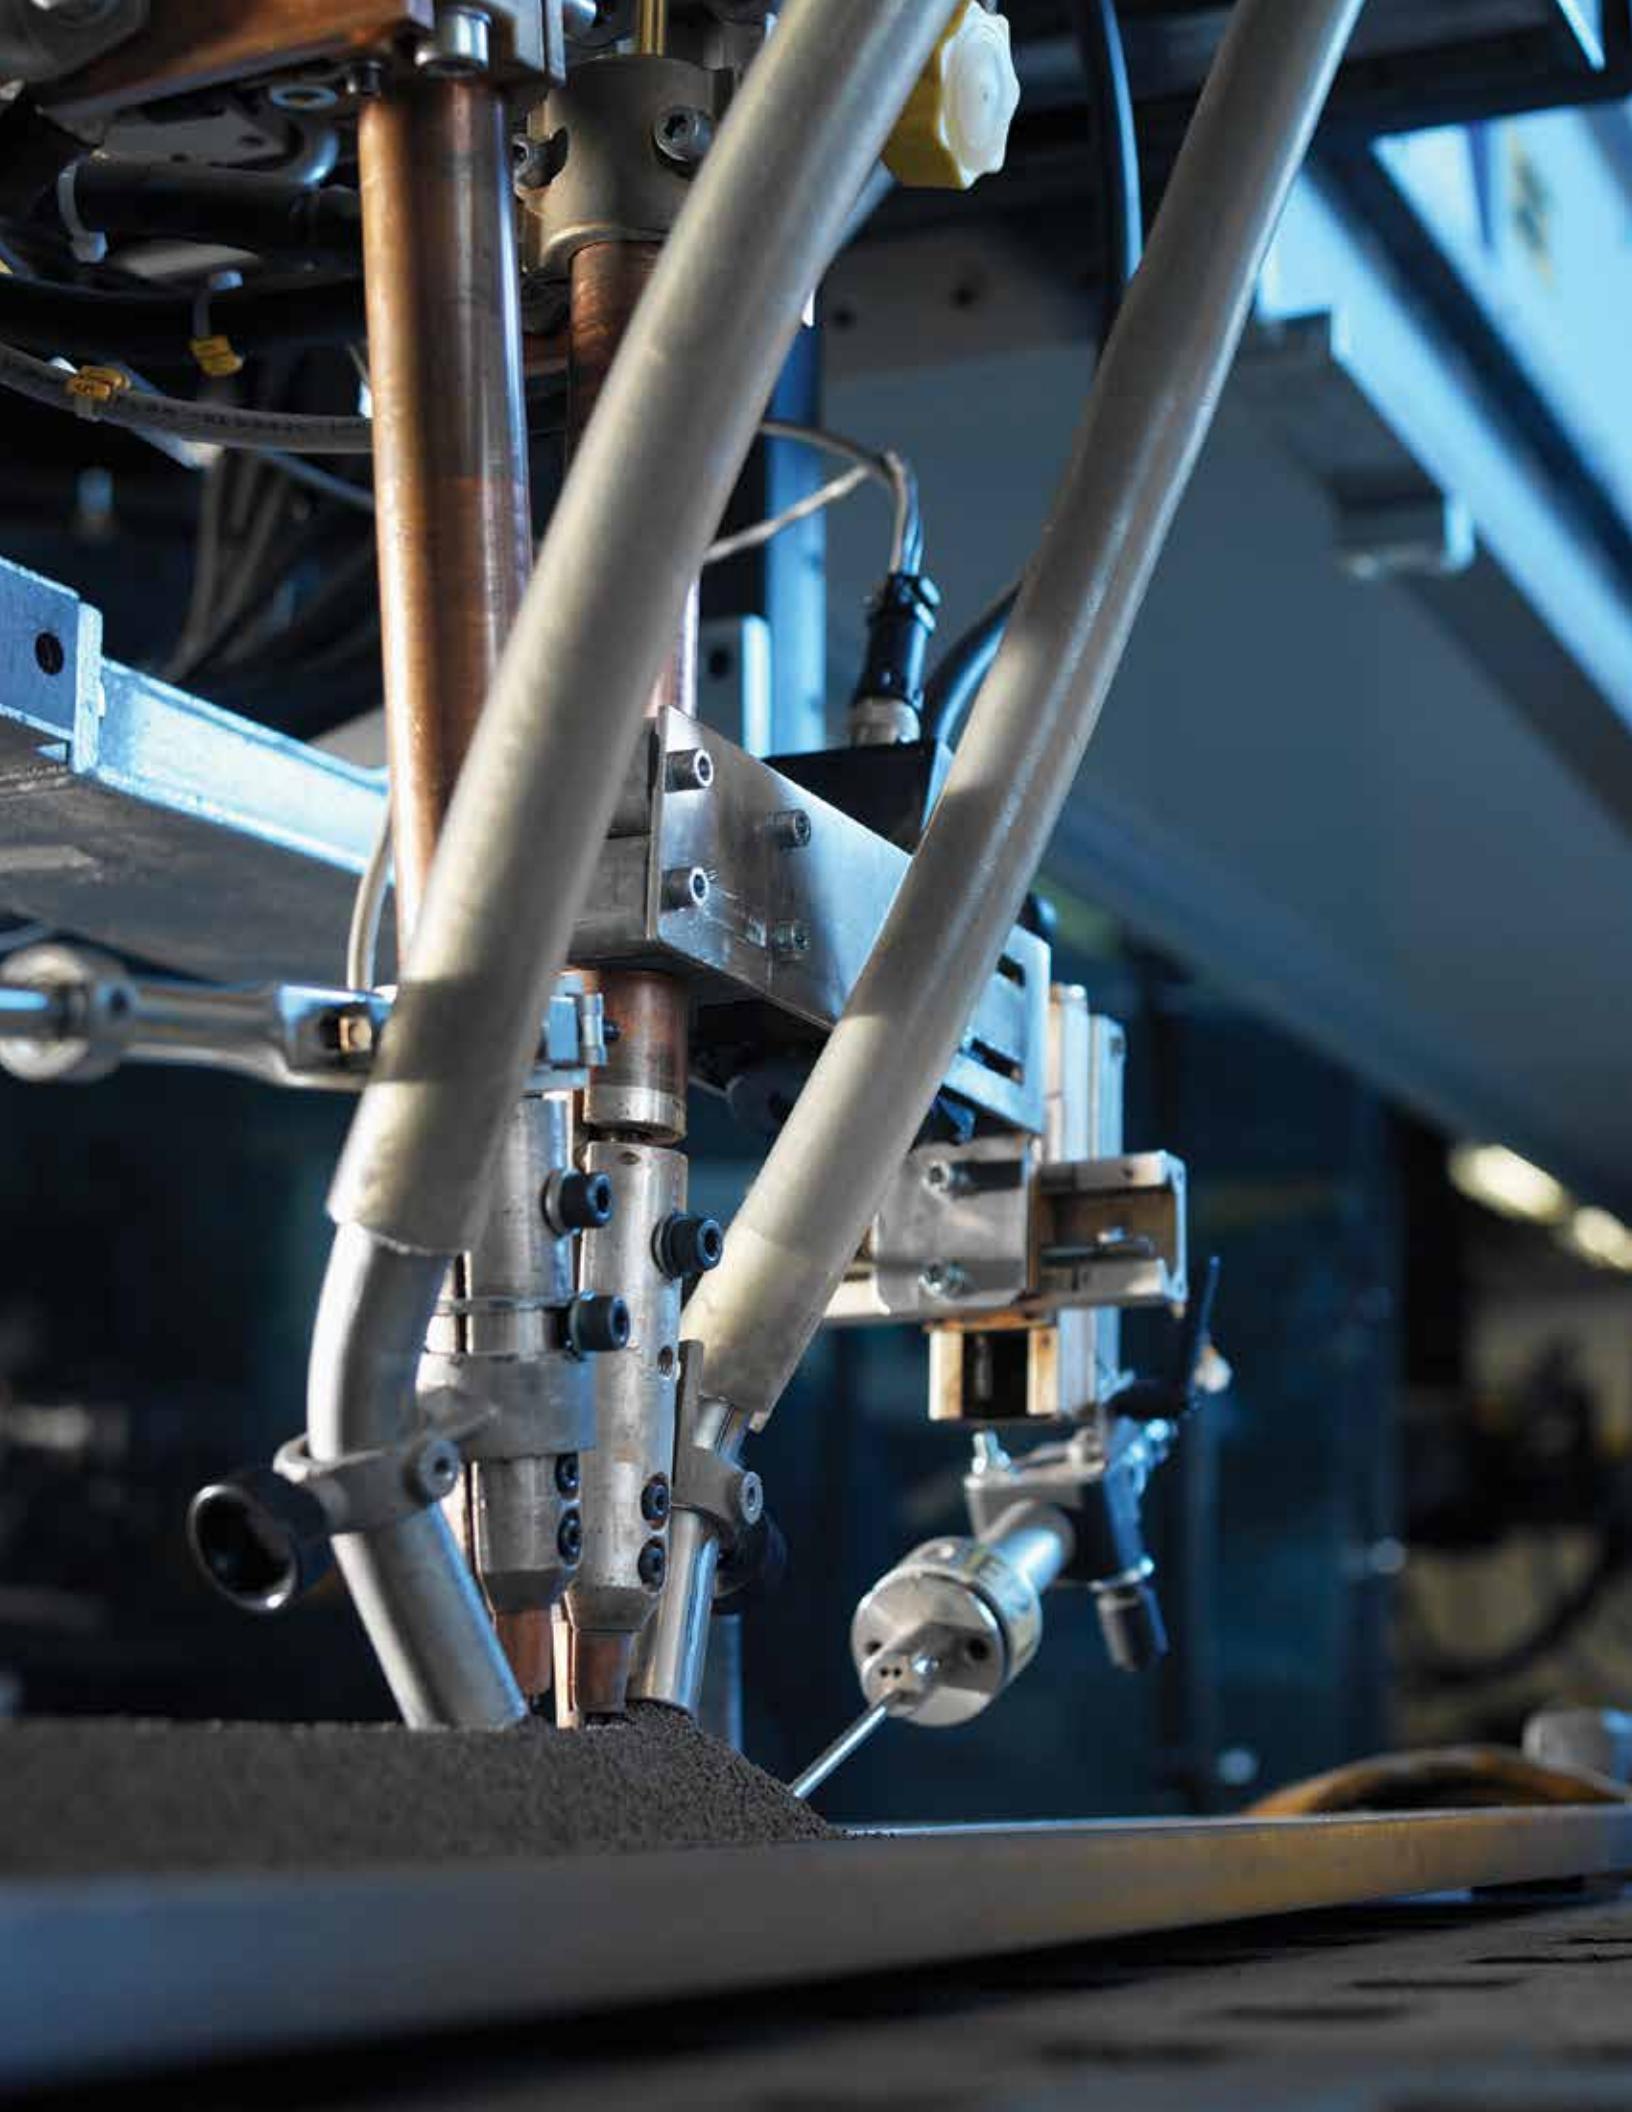

With the Combirex DX, plate marking can be accomplished by the m³ plasma system or by an optional air scribe marker, allowing accurate marking and cutting on the same parts.

ESAB Welding Automation

The 21st century has brought many new challenges to the metal fabrication industry: metal fabricators must meet the demand for increased quality while providing their customers with an overall lower cost; productivity is challenged by the shortage of skilled workers; profitability is challenged by the pressure from intense global competition. As a result, manufacturers are required to utilize new fabrication techniques to build increasingly complex designs and structures.

Welding automation meets some of these challenges with higher quality, capacity, and, of course, much higher productivity than manual welding applications. At ESAB, we develop and manufacture a wide range of mechanized and automated welding products to create the special solution you might need.

Whether your metal fabrication project requires simple components, such as tractors, or requires large turn-key systems and production lines, we offer a full range of automation products to meet every need including the widest range of consumables in the world.

You can also rely on ESAB for total system responsibility. Because we manufacture our own equipment, we can integrate the welding process, arc path, and material handling. An integrated design simplifies the equipment, improves reliability, and ensures unsurpassed performance.

We encourage you to consult one of our Welding Automation Experts for more details regarding processes, applications, and customized solutions.

The products offered in this catalog are for standard submerged arc welding (SAW) applications. For the complete ESAB Welding Automation product offering, including medium- and heavy-duty systems, handling equipment, accessory components, and special applications, please visit www.esabna.com, order our Welding Automation Equipment catalog #AUT-1004, or call us at 1.800.ESAB.123.

Special Applications

Railtrac 1000

Multi-Purpose System for Welding and Cutting

- Ideal for automated gas metal arc welding (GMAW)
- Made from aluminum and steel parts to withstand harsh environments
- Ideal for horizontal to horizontal and vertical (up only) welding
- Can be customized with a wide range of accessories
- New joint system allows for both stiff and flexible rail applications
- Straightforward, well designed programming unit with up to 5 different programs
- Standard software offers programmable interval welding and backfill function
- Operator can control machine motions with hand held remote without lifting welding visor
- Remote control available on FW1000/FWR1000 with start/stop, shift program, weaving width, zero line displacement, and many more features
- Adjust welding current and voltage during welding with the two potentiometers on the remote control

Railtrac 1000

System Configuration

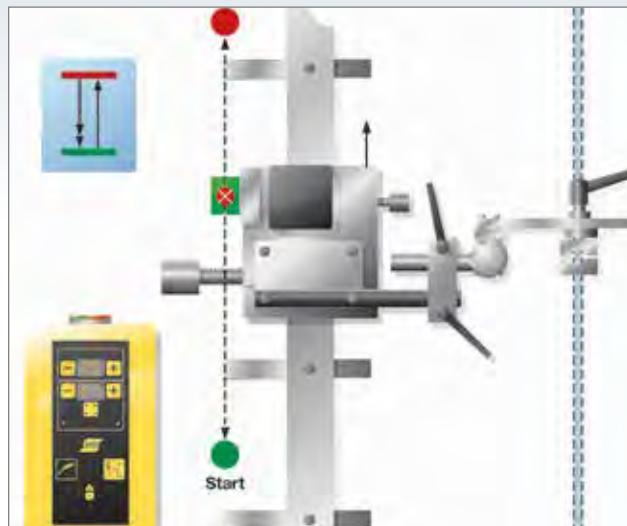

Railtrac F1000 Flexi

A mechanized system with a flexible combi-rail, suitable for both inside and outside welding and cutting along sharp curves as well as straight surfaces. This model is also suitable for thermal cutting.

Railtrac FR1000 Flexi Return

Railtrac FR1000 has the combi-rail and facilities for movable start and stop for automatic return for any length. This system is ideal for use in fixed installations or where a weld is repeated over and over again.

Railtrac FW1000 Flexi Weaver

This version has a flexible combi-rail and a weaver for weaving in many different patterns. It is also equipped with a remote-controlled unit with a user-friendly design.

Railtrac FWR1000 Flexi Weaver Return

Like the Flexi Weaver, this system has a weaving unit, but it also has adjustable start, stop, and return facilities. Equipped with a remote control unit with a unique design, this is a very advanced solution for a variety of applications.

¹FW1000/FWR1000 only.

Miggytrac 1001

For Use with GMAW Power Sources

- Small, compact, motorized tractor
- Easy to attach to ESAB welding torch
- The tractor is held in position on the workpiece with a magnet, even if the workpiece is bent or angled
- Remote-controlled travel
- Start/stop function from the remote control panel
- Travel speed settings of 6-47 ipm (0.15-1.2 m/min), wire feed speed, and voltage all functions of the remote control
- Significantly increased welding speed, especially when using cored wire

¹12 pin male-23 pin male Burndy style Origo Feed and Aristo Feed feeders.

²Required for connection of Miggytrac to Aristo Feed feeders.

³12 pin male Burndy style open-end. Requires user-supplied plug to connect cable to OEM feeders.

Specifications

Miggytrac 1001	
Control voltage, V AC	36-46
Power, W	20
Welding speed, ipm (mm/min)	6-47 (150-1200)
Remote control outlet	Volt and ampere (wire feed speed)
Connection	Burndy, 12 pins
Dimensions, LxWxH, in. (mm)	10.5x10x10.5 (266x257x267)
Weight, lbs. (kg)	15.4 (7)

Miggytrac 2000

For Use with GMAW Power Sources

- Ideal for long welds eliminating stressful welding positions for the welder
- The tractor is held in the correct position on the workpiece with a magnet, even if the workpiece is bent or angled
- Guide wheels adjust to allow the unit to drive itself against the workpiece
- Program for intermittent welding
- Set length of weld and distance between welds from 0.4-39 in. (1-99 cm)
- High-speed travel between welds - 98 ipm (250 cm/min) - for increased efficiency
- Backfill function for crater filling at the end of the weld
- Adjust the welding current and voltage during welding with the two potentiometers on the control panel (when using ESAB equipment)

A2 Multitrac PEI

Universal Welding Tractor for SAW and GMAW

- Can be connected to most analog, DC power supplies
- Compact and efficient design allows for easy movement between workpieces
- Self-propelled, four-wheel drive for stable, accurate, and constant operation
- A2 PEI process controller allows simple setting of travel speed, voltage, and wire feed speed
- Heavy-duty feed unit ensures an even and stable wire feed for top quality, homogenous welding
- Horizontal, vertical, and rotary slides allow for quick adjustment of the nozzle into various positions
- Reliable mechanical components, even under harsh working conditions
- Easy to use control equipment with different start methods; direct or scratch start.
- Wide range of accessories available
- Units available for gas metal arc welding (GMAW) and submerged arc welding (SAW)

A2 Multitrac PEK

Universal Welding Tractor for SAW and GMAW

- The A2 Multitrac, with A2-A6 PEK process controller, is available for both submerged arc welding (SAW) and gas metal arc welding (GMAW)
- Choose single or twin wire for submerged arc welding (SAW)
- The feed unit secures an even, stable wire feed speed
- Four-wheel drive ensures accurate travel speed
- Digital control panel allows exact pre-set and control of welding parameters
- A2 Multitrac is fully mobile and can easily be moved from one welding station to another
- Can be quickly set-up for different workpieces
- Designed for use with ESAB LAF (DC), TAF (AC), and ARISTO® 1000 AC/DC welding power sources
- Units available for gas metal arc welding (GMAW) and submerged arc welding (SAW)

A6 Mastertrac

Self-Propelled, 4WD, Automatic Tractor

- Self-propelled, 4WD, automatic welding machine
- Quick set-up for different workpieces
- Suitable for heavy production welding with capacity for up to 0.24 in. (6 mm) wire using 1500A direct or alternating current
- Designed for use with LAF (DC), TAF (AC), and ARISTO® 1000 AC/DC welding power sources
- Available for single or twin arc welding:
 - Single: with standard or high speed motor
 - Twin: convert an A6 Single Mastertrac into a highly productive automatic twin arc welder for fillet and butt welds with a simple add-on for the extra wire and without the use of an extra machine or power source
- Weld mild steel and aluminum solid or cored wire by modifying an A6 Single Mastertrac with an easy conversion kit for gas metal arc welding (GMAW)
- Pre-set and control of welding parameters with the A2-A6 PEK process controller - a digital control system with display menus; 255 different weld sets can be stored

A2 PEI Process Controller

For Use with ESAB Power Sources and Motors

- Control system for A2 tractors and welding heads
- Analog type that can control most brands of power supplies
- Suitable for submerged arc welding (SAW) or gas metal arc welding (GMAW)
- Travel speed, voltage, and wire feed speed can be adjusted by simply turning the knobs - actual data is shown on digital displays during welding
- Change welding direction using switch on front panel
- Choice of scratch start or direct start methods
- Adjustable burnback time

Specifications

A2 PEI Process Controller	
Connection voltage from the power source	42V AC, 50/60 Hz
Connection power	max 700 VA
Motor connection adjusted for ESAB's A2 motors	42V DC, 3.5 A P100%, 4.5A P60%
Speed control	Internal EMK-adjustment
Welding speed, ipm (m/min)	4-79 (0.1-2.0) depending on travel carriage
Max. transport speed, ipm (m/min)	2.0 (79)
Consumable wire feed speed, ipm (m/min)	20-640 (0.5-16.2) depending on wire feed unit
Burnback time, s	0-2.0
Gas pre-flow time, s	0.5
Gas post-flow time, s	1.0
Connection to power source	Burndy contact, 23 poles
Welding voltage control, V DC	0-10
Flow guard	NO Contact / PNP OC
Limit switches	NO Contact / PNP OC
External current shunt, A/mV	1000/60, 1500/60, 600/100, 750/100
Operating temperature, °F (°C)	14-104 (-10 - +40)
Weight, lbs. (kg)	14 (6.2)
Dimensions LxWxH, in. (mm)	7.8x9.0x8.7 (197x227x220)
Enclosure class	IP 23

A2-A6 PEK Process Controller

For Use with ESAB Power Sources and Motors

- For use with ESAB automatic DC power sources LAF 631/1001/1251/1601, AC power sources TAF 801/1251, and Aristo® 1000 AC/DC power source
- CAN-bus system for data transfer
- Prepared for submerged arc welding (SAW), gas metal arc welding (GMAW), and arc gouging
- User-friendly clear text menus
- Selectable welding process
- Memory for 255 parameter sets
- Constant current or constant wire speed
- Encoder-controlled motors for top performance motion control
- USB port for data back-up and transfer
- Used welding parameters can be stored directly on a USB memory drive
- Documentation of used welding parameters on PC or through LAN with WeldPoint™
- Five “soft keys” can be configured according to operator preferences

Adjustable sun shield for better visibility for outdoor use

A2-A6 PEK process controller 0460504880

Options & Accessories

I/O-Module	0462080001
Set of connectors	0462119880
Cable restraining bracket.....	0460861880

Specifications

A2-A6 PEK Process Controller	
Connection voltage from the power source	42V AC, 50/60 Hz
Connection power	max 900 VA
Motor connection adjusted for ESAB's A2 and A6 motors	connection of 2 motors, motor current 6A cont., max 10A
Speed control	feedback from pulse encoder
Welding speed, ipm (m/min)	4-79 (0.1-2.0) depending on travel carriage
Max. manual travel speed, ipm (m/min)	79 (2.0)
Consumable wire feed speed, ipm (m/min)	12-984 (0.3-25) depending on wire feed unit
Valve output	1 pc, 42 V AC, 0.5A
Inputs	for connection of sensors or limit switches
Connection to power source	Burndy contact 12-poles
Max ambient temperature, °F (°C)	113 (45)
Min ambient temperature, °F (°C)	5 (-15)
Relative humidity (of air)	98%
Dimensions, LxWxH, in. (mm)	7x9.25x11 (246x235x273)
Weight, lbs. (kg)	14.5 (6.6)
Enclosure class	IP 23

LAF 631, 1001, 1251 & 1601

DC power sources for SAW and GMAW

- Three-phase, fan-cooled DC welding power sources for high productivity automated submerged arc welding (SAW) or gas metal arc welding (GMAW)
- Used with ESAB's A2-A6 equipment range and A2-A6 PEK or A2 PEI process controllers
- Good arc stability at both high and low arc voltages
- Adjust and monitor the welding parameters on the power source from the front panel of the PEK or PEI process controller
- Extended welding current by connecting two power sources in parallel for demanding applications
- Power source prepared for communication using most standard protocols like TCP/IP (LAN), CAN or even straight communication with a PLC
- Optional communication modules might be needed depending on the type of protocol used
- Ideal for SAW applications such as windtower components, nuclear power vessels, boilers, and shipbuilding applications
- Ideal for GMAW applications such as welding the root pass in heavy pipe production

This symbol indicates that the welding power source may be used in areas with an increased electrical hazard, e.g. areas where the electrical hazard is increased due to the proximity to earthed metal objects and/or dampness.

TAF 801 & 1251

Square Wave AC Power Sources for SAW

- Square wave AC power sources that convert the secondary voltage from a sinus wave via a thyristor-controlled rectifier bridge to a square wave arc voltage with excellent strike characteristics and welding properties
- Capacity for continuous welding
- Arc voltage pre-set
- Reliable square wave striking
- Arc voltage or current feedback
- Optimized open circuit voltage
- Compensation of mains supply fluctuation
- Voltage drop compensation for long welding cables
- High power factor ensuring low power consumption
- Safety control voltage, 42V
- Prepared for Scott connection of two power sources
- Used in combination with ESAB's A2-A6 equipment range and the A2-A6 PEK or A2 PEI process controllers
- Power source prepared for communication using most standard protocols like TCP/IP (LAN), Anybus, Profibus, CAN or even straight communication with a PLC

ARISTO® 1000 AC/DC SAW

AC/DC inverter power source for SAW

- The ARISTO 1000 AC/DC power source is designed to deliver the best submerged arc welding (SAW) performance with the lowest power consumption resulting in more welding per kilowatt hour
- Designed for use with the A2-A6 PEK process controller and the robust A2/A6 feeder units
- A global inverter - connect to a three phase mains supply from 380V to 575V, 50 or 60Hz
- AC settings - Bead Profile Modelling™
- Full control of the settings for AC welding - by controlling the AC frequency, balance and offset, you can optimize the penetration profile, heat input, deposition rate, arc stability, and stirring effect to suit your individual needs
- Change between DC and AC "on the fly" - minimize downtime and weld defects with the push of a button with the patent pending "on the fly" function
- More output - two ARISTO 1000 AC/DC power sources can easily be connected in synchronized parallel mode to deliver more welding current if required
- Designed for heavy-duty industrial environments
- Long welding cables - patent pending Cable Boost™ technology stores energy and instantly delivers up to 450% additional energy when required extending the maximum usable weld cable length by more than a factor of two without compromising the weld result
- Remote-controlled on/off function save energy - multiple power sources in a remote location can be controlled by a remote function and can easily be switched off to save energy
- Power efficiency and less current consumption to reduce your installation and running costs and help to reduce your carbon footprint
- All cables are connected in a cabinet in the front of the machine, easily accessible for service and well protected from damage for uninterrupted welding production
- Ideal for these applications:
 - Windtower structures, nuclear components
 - Beams, bridge components
 - Trailer beams, excavator components
 - Panel lines, sub components
 - General fabrication
 - Single or multi-wire applications

A2S Mini Master

Multi-purpose welding system

- Versatile welding system for single wire submerged arc welding (SAW), twin wire SAW, or gas metal arc welding (GMAW)
- Lightweight, compact design for greater flexibility
- Modular design allows user to expand, integrate, or modify the system quickly and easily
- Use with A2-A6 PEK or A2 PEI process controller
- Accurate, easy joint-tracking with manual or motorized slide system and manual PAV or automatic GMH joint tracking
- The system attaches to any beam travelling carriage or Column & Boom system

A6S Arc Master

Modular system for GMAW and SAW

- Comprehensive component and module system make process customization easy
- A6 VEC motor for reliable and consistent wire feed
- Accurate, easy manual PAV or automatic GMH joint tracking with manual slides or joystick-controlled, motor-operated cross slides
- Capable of heavy-duty gas metal arc welding (GMAW), single/twin wire submerged arc welding (SAW), as well as strip cladding, and ICE™ (Integrated Cold Electrode) welding with optional accessories
- Uses A2-A6 PEK process controller for fast, accurate pre-setting of all parameters before welding starts
- Feedback system ensures high and consistent welding quality - saves time and material
- The welding heads can be equipped with a standard wire feed unit (gear ratio 156:1) or with a high-speed wire feed unit (gear ratio 74:1)

Unrivaled Service and Support.

Every ESAB product is backed by our commitment to superior customer service and support. Our skilled customer service department is prepared to quickly answer any questions, address problems, and help with maintenance and upgrading of your equipment. Our products are backed with the most comprehensive warranty in the business.

With ESAB, you can be sure that you have purchased equipment that will meet your needs today and in the future. Product and process training is also available. Ask your ESAB sales representative or distributor for a complete ESAB solution.
